Tier pack: Supported route — Studio skills and safe workshop practice

Pathway: TRACK · Week 2 Part 2 · Big question: How do we score, cut, and laminate heavy card safely to build rigid architectural relief?

Supported route studio steps

Step 1: Use the safety ruler and heavy scissors/scorer to cut four straight girder strips along printed guide lines.

Step 2: Laminate two strips together to build a thick horizontal main deck on your base board.

Step 3: Add two diagonal braces and secure the corners with pre-cut triangle gusset plates.

Step 4: Brush a thin dark slate wash over the finished frame.

Success check

Safely cut laminated girder frame with gusset corners and unified dark wash.

Key words helper

• score: To press or lightly indent a line along card so it folds or snaps cleanly.

• laminate: To glue two or more layers of card together for extra thickness and strength.

• gusset: A small angled corner plate that reinforces where two beams meet.

Review checklist

[ ] Check that all tools are docked safely in the central table block and counted.

[ ] Tilt your primed relief panel toward the light to inspect the depth of your laminated beams.

[ ] Place your board flat on the drying rack.
