Teacher and cover plan — Independent surface and structure challenge

Pathway: TRACK · Week 3 Part 2 · Big question: How can we combine collagraph relief, foil embossing, and monochromatic wash in an architectural panel?

Learning goals and studio kit

• Construct a textured architectural study combining card relief, embossed metal foil, and surface grain.

• Control a three-value monochromatic ink or acrylic wash to unify and deepen the recessed planes.

• Evaluate which surface combination creates the strongest illusion of weathered industrial structure.

Studio kit: A4 heavy greyboard panels, corrugated card, craft foil, foam pads, blunt styluses, black/sepia acrylic wash, white/chrome dry-brush pigment

Arrival and starter

Arrival: Look at the two architectural relief samples. Sample 1 leaves the card and foil raw; Sample 2 adds a dark wash into the grooves and wipes the top ridges clean. Which looks heavier and more weathered?

Starter question: When you brush a dark wash over embossed foil and wipe the top surface gently with a tissue, where does the dark ink stay?

Teacher model (I do)

Step 1: Assemble the multi-texture collagraph base: I glue ridged card in the background, laminated smooth girders in the midground, and an embossed foil plate at the focal joint.

Step 2: Apply dark wash into crevices: I brush dark slate wash across the seams and over the embossed foil, then gently dab the high foil ridges clean.

Step 3: Dry-brush the raised flanges: I skim a nearly dry brush of pale chrome/white across the top beam edges to complete the three-value tonal range.

Practice routes (Supported / Independent / Aspire)

Supported: Three-texture architectural tile completed with dark groove wash and bright ridges.

Independent: Resolved architectural collagraph with three-value monochromatic patina and log evaluation.

Aspire: Multi-depth relief panel with directional oxide/chrome patina and written critique.

TA and cover notes

TA focus: Have damp tissues and dry kitchen roll ready on every table so pupils can wipe high foil points straight after brushing wash.

Staff prep: Staff preparation only: review a short demonstration of collagraph assembly and ink-and-wipe patina

on embossed foil.
