Tier pack: Supported route — Independent surface and structure challenge

Pathway: TRACK · Week 3 Part 2 · Big question: How can we combine collagraph relief, foil embossing, and monochromatic wash in an architectural panel?

Supported route studio steps

Step 1: Glue one corrugated background strip and two smooth girder bars onto your greyboard base.

Step 2: Emboss a row of rivets on a foil strip, glue it across the centre joint, and press the edges firm.

Step 3: Brush dark wash over the foil and seams, then dab the top of the foil clean with a paper towel.

Step 4: Skim chrome dry-brush across the ridged card.

Success check

Three-texture architectural tile completed with dark groove wash and bright ridges.

Key words helper

• collagraph: A textured relief board built by gluing varied flat and bumpy materials onto a base.

• monochromatic: Using dark, mid, and light tones of a single colour plus black and white.

• recessed: Set further back into the surface so it catches deeper shadow.

Review checklist

[ ] Hold your panel at an angle to the light and check for dark crevices, mid-tone plates, and bright ridges.

[ ] Ensure your technical evaluation note is completed in your studio log.

[ ] Place your panel flat on the drying rack.
