Tier pack: Supported route — Critique, test and redirect the design

Pathway: TRACK · Week 4 Part 2 · Big question: How do we use a structured studio critique to spot a weak area and test one material fix?

Supported route studio steps

Step 1: Prop your panel up and tick one strength and one target on your critique card.

Step 2: Test your chosen fix (adding a foil strip or chrome dry-brush) on a small scrap square.

Step 3: Apply the same fix onto your main relief panel.

Step 4: Glue your test swatch onto your log sheet and tick 'Fix applied'.

Success check

Critique card ticked, test swatch mounted in log, and upgrade applied to main panel.

Key words helper

• critique: A structured studio check that identifies strengths and specific next steps.

• diagnostic: Spotting the exact visual or structural reason why an area looks weak.

• redirect: Adjusting your plan or adding a layer to solve a design problem.

Review checklist

[ ] Place your upgraded panel next to your mounted swatch to verify the improvement.

[ ] Thank your critique partner for their diagnostic feedback.

[ ] Store your panel safely for final resolution.
