Teacher and cover plan — Creative practitioners and studio roles

Pathway: TRACK · Week 5 Part 2 · Big question: How do sculptors, printmakers, and exhibition designers turn raw materials into public artworks?

Learning goals and studio kit

• Investigate three studio roles: structural sculptor, relief printmaker, and exhibition designer.

• Analyse how practitioners move from site brief and maquette to full-scale fabrication.

• Create a visual practitioner study page linking one studio role to your own relief panel.

Studio kit: Practitioner role fact cards, studio workflow diagrams, A4 study sheets, fineliners, toned paper strips, metallic pencils, glue sticks

Arrival and starter

Arrival: Imagine a council wants a 10-metre steel sculpture for a park. Does the sculptor start welding 10-metre steel beams on day one?

Starter question: How does the cardboard and foil relief panel you built in Weeks 2-4 connect to professional sculpture practice?

Teacher model (I do)

Step 1: Compare the three studio roles: I read the role profiles for Structural sculptor, Collagraph printmaker, and Exhibition designer and highlight their core tools.

Step 2: Create a visual response study: On my practitioner sheet, I construct a small layered card-and-line study showing how a maquette tests shadow and scale.

Step 3: Link practitioner methods to my own work: I write three clear bullet points explaining how my relief panel uses maquette layering and surface patina.

Practice routes (Supported / Independent / Aspire)

Supported: Three roles matched, maquette diagram completed, and personal studio link written.

Independent: Role summaries, annotated maquette diagram, and comparative paragraph linking to own practice.

Aspire: Full workflow analysis, scale-figure installation drawing, and curatorial lighting rationale.

TA and cover notes

TA focus: Display a small cardboard maquette next to a photo of a large steel arch with a small card scale-person standing beside it to make 'scale' concrete.

Staff prep: Staff preparation only: review a short overview of studio roles (sculptor, printmaker, exhibition designer) and

maquette prototyping.
