Tier pack: Independent route — Deliberate practice and documented progression

Pathway: SUMMIT · Week 2 Part 1 · Big question: How do we use structured three-stage deliberate practice to master a target skill and document progression?

Independent route studio steps

Step 1: State your Week 1 target at the top of your A3 progression board.

Step 2: Execute study 1, write Diagnostic bridge 1->2 identifying one control flaw and the variable you will adjust.

Step 3: Execute study 2 applying that adjustment, write Diagnostic bridge 2->3 focusing on five-value contrast and edge quality, and resolve Study 3.

Step 4: Write a concluding studio synthesis explaining how you achieved mastery of the medium.

Success check

Three progressive studies, two diagnostic bridge notes, and a concluding technical synthesis.

Key words helper

• deliberate practice: Repeating a specific skill while consciously isolating and fixing one technical variable each time.

• cross-contour: Curved shading lines that wrap around the 3D surface of a form to show volume.

• variable: The single factor you change between trials (such as brush water load, line spacing, or pencil angle).

• diagnostic note: A brief analytical comment between trials identifying what worked and what to adjust next.

• tonal range: The full span of values from deepest core shadow through mid-tones to crisp highlight.

Review checklist

[ ] Lay your Week 1 baseline audit next to Study 3 on today's sheet to verify measurable growth.

[ ] Check that both Diagnostic bridge notes clearly explain what you changed between trials.

[ ] File your progression board as Page 2 of your studio portfolio.
