Staff answers & diagnostic guide — Drafting a structured visual review

Pathway: SUMMIT · Week 7 Part 1 · Big question: How do we synthesise our exhibition field sketches and portfolio evidence into a structured critical review?

Starter answer & explanation

Question: In a critical art review, why must every analytical claim be paired with a specific visual example from your Week 6 field sketches?

Correct: Citing concrete visual details (like 'the 25-degree raking light across the embossed gusset') proves your judgement is grounded in close observation — Exactly! Evidence-based analysis is what gives a critical review authority.

Guided team check (We do) answers

Q1: Which of these sentences demonstrates the 'Claim + Visual evidence + Impact' formula? -> The central emblem commands immediate attention [Claim] because its bright ochre rim sits against a deep indigo wash [Evidence], pulling the viewer's eye across the room [Impact] (Yes! Claim, specific visual evidence, and viewer impact locked into one crisp sentence.)

Q2: How do numbered figure tags like '[see Fig. 1]' strengthen an illustrated critical review board? -> They link the exact sentence in your written review directly to your observational sketch on the same board (Spot on. Cross-referencing text and drawings is professional design-journal practice.)

Q3: When conducting your final 7-week Portfolio audit at the end of the session, what order tells the clearest story? -> Chronological studio progression from Week 1 Baseline audit through Skill development, Practitioner study, Resolved outcome, and Critical exhibition Review (Correct. That sequence proves your complete journey as an independent artist and critic.)

Exit check answer

Question: What are the three parts of the formula for a strong analytical sentence in an art review?

Correct: Claim + Specific visual Evidence + Impact on the Viewer — Correct. Grounding every claim in visual evidence and viewer impact builds a compelling critical review.
