Body Needs · Knowledge Organiser

Learning goal: I can say how animals get food and match food to three jobs in the body.

Today I Can

I can say that plants make food using light, while animals must eat.

I can name the three jobs food does: go (energy), grow, and keep well.

I can explain why our body also needs water every day.

Must-Know Words

energy: fuel from food that helps us move and keep warm

grow: to build and mend bones, muscles, and skin

keep well: to help the body fight off illness and stay healthy

water: a drink every living body needs each day

Core Science Steps

First, compare plants and animals. Green plants use light to make their own food.

Animals cannot do this. Humans, dogs, and birds must eat food to live.

Food does three big jobs: Go (energy to move), Grow (build and mend), and Keep well.

Keep the Science Clear

Match the food job to what the body is doing: moving needs energy, growing needs building food, and staying well needs fruit, veg, and water.

Food is not just for stopping hunger; each kind of food has a job inside the body.
