Friction: Test the Surfaces · Word Page

Learning goal: I can compare friction on different run-out surfaces using repeated measurements and a controlled setup.

Words for This Lesson

run-out surface: the flat test surface at the bottom of the ramp where the block slows and stops

stopping distance: how far the block travels along the run-out surface before stopping, in cm

control variable: a factor kept the same so the surface comparison is fair

repeat trial: running the same surface test more than once to check consistency

How to Use These Words

Point to a word when you explain your idea.

Help: Surface __ stopped the block in __ cm and __ cm, compared with __ cm and __ cm on __. This shows greater friction on __ because __.
