

Does bright mean source?

Learning intention

Distinguish objects that give out their own light from surfaces that reflect light.

A mirror looks bright.

A lamp looks bright.

Did their light start in the same place?

Follow the light

1. What do we need to see?
2. Does light enter the eye?
3. Does an unlit plain card glow?

I ask where the light began

The lit lamp gives out light. The card receives light. It reflects some of that light.

A mirror redirects light

The mirror reflects light; it does not make the light.

Light reaches the mirror. Reflected light reaches the screen. Switching off removes this source.

Paper reflects too

A clear mirror image is not needed for reflection.

Paper need not look shiny. Some reflected light reaches us.

Sort the evidence cards

Read A–F. Choose source or reflector. Give a clue, then swap roles.

Card	Stated case
A	Lit LED lamp; gives out light
B	Moon; lit by sunlight
C	Phone screen on; emits light
D	Mirror; returns arriving light
E	Firefly; produces its own light
F	White paper; lit by room light

Constructed teaching evidence

W1. Which three are sources?

The switch-off challenge

The phone screen is now off.

Room light still reaches it.

Can it be visible? Why?

W2. How does switching off change our account?

Which statement works?

Choose one and give a reason.

- A** All shiny objects make their own light.
- B** Only a mirror can reflect light.
- C** We can see paper when reflected light reaches our eyes.

Choose your investigation route

Match source or reflector.

Write a display label.

Repair a sorting rule.

Use the evidence

Read or point to one clue.

Record what it supports.

Keep your explanation short.

Make your own science record

Complete your chosen route.

Use a diagram, words or speech.

Check one answer with the evidence.

Check and improve

Does my answer match the evidence?

Have I explained why?

Improve one label or sentence.

Lundy loop: improve our account

Choose how to share one idea.

Listen to another explanation.

Use evidence to improve our account.

How should we replace “bright means source”?

Three quick checks

E1. What is a light source?

E2. Does ordinary paper reflect light?

E3. Does the Moon make the sunlight we see from it?
