

Evidence: six light cases

Light-source detectives

Name _____ Date _____

Constructed teaching cards. Classify the stated case.

A • Lit LED lamp

The switched-on LED gives out visible light.

C • Phone screen on

The working display gives out visible light.

E • Firefly

This insect produces light through a chemical reaction in its body.

B • Moon

Sunlight reaches the Moon. Some is reflected towards Earth.

D • Mirror

Room light reaches the mirror and is reflected.

F • White paper

A lamp lights the ordinary paper. The paper reflects some light.

W1. Which cards describe sources? Give one clue.

W2. The phone screen is off in a lit room. How can it still be seen?

Route 1 • Sort and explain

Word bank: source / reflects / light / eye.

S1. Card A is a ____.

A. Source

B. Reflector only in this case

S2. Card D ____ light from the room.

A. Makes

B. Reflects

S3. Put B and F in the source or reflector group.

S4. Explain how light from paper reaches the eye.

S5. Name one source that is a living thing, using the cards.

Route 2 • Make a display label

Use the card evidence, not brightness or shine.

Task	Card	Source or reflector?
T1	A	
T1	B	
T1	C	
T1	D	
T1	E	
T1	F	

T2. Write a label explaining how a mirror can look bright.

T3. Draw a source → paper → eye light path.

Route 3 • Challenge the rule

A display says: "If it shines, it must be a source."

X1. Use a card to show why this rule fails.

X2. Replace it with a better sorting question.

X3. Compare the phone screen on and off in a lit room.

X4. A mirror is placed in a box with no light at all. Predict whether it can light the box. Explain.

Exit and reflection

Point, draw, write or tell an adult.

E1. What is a light source?

E2. Does ordinary paper reflect light?

E3. Does the Moon make the sunlight we see from it?

R1. Which idea did you improve after hearing evidence?

R2. What would you investigate or ask next?
