

Can one plant part do every job?

Learning intention

Explain how roots, stem, leaves and flowers contribute to the life of a flowering plant.

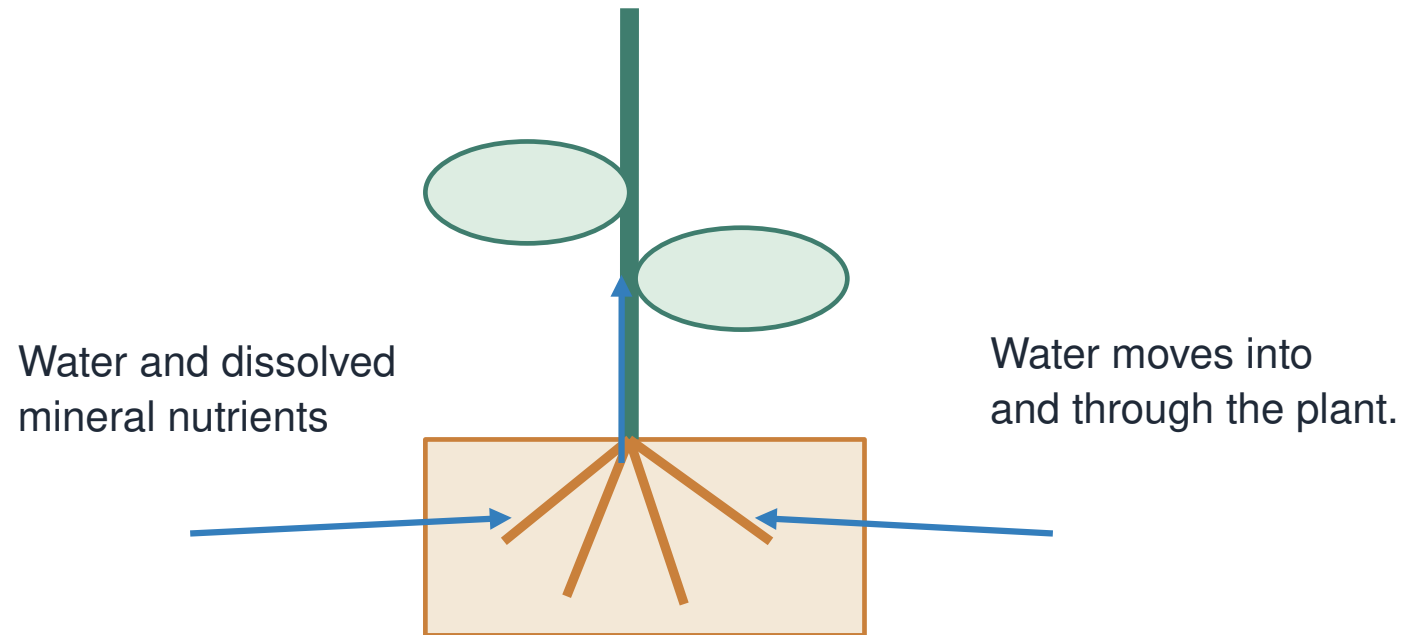

Follow the work through the whole plant.

Name the part before its function

1. Which part branches below soil?
2. Which part holds leaves?
3. Which structure can form seeds?

I connect entry to transport

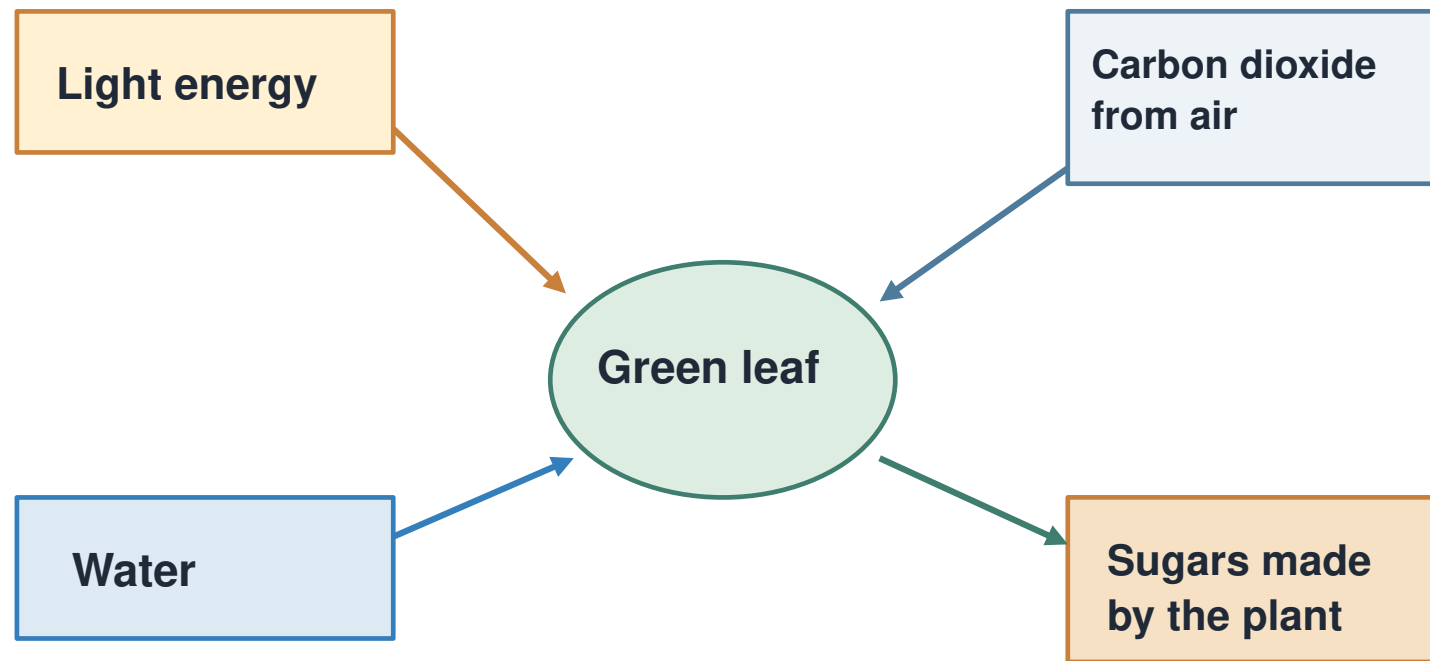

The root system anchors the plant.

Mineral nutrients are needed; they are not ready-made plant food.

Roots take in water and minerals. The stem contains transport pathways.

I distinguish materials from sugar-making

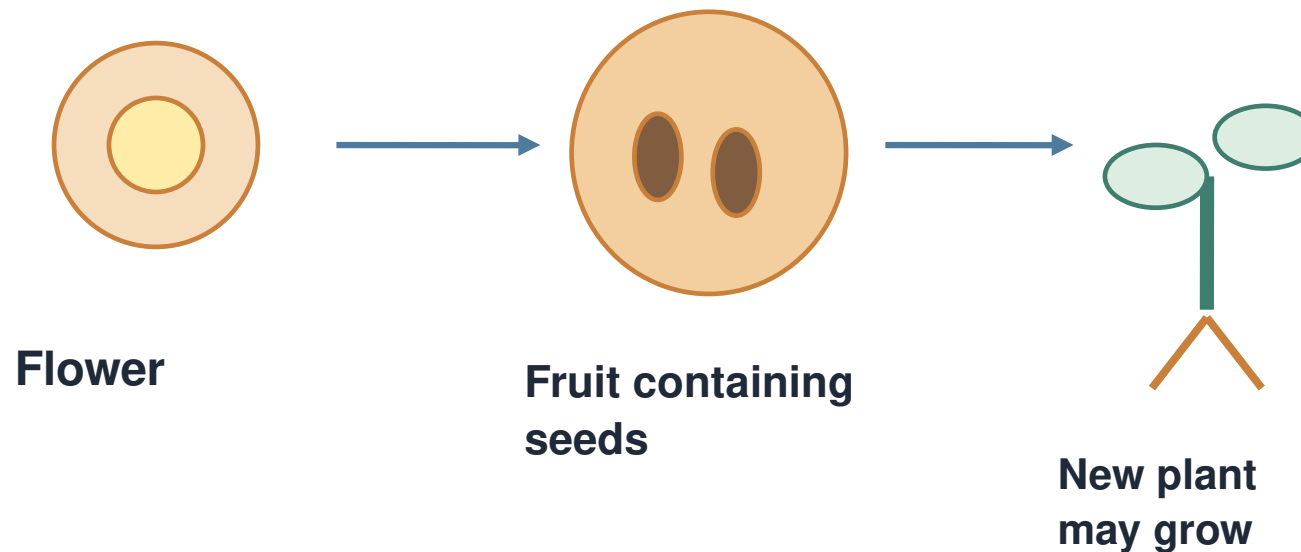

Roots supply water and minerals; the plant makes its sugars.

Light supplies energy. Green leaves make sugars. Minerals are not ready-made food.

I give flowers a biological function

After successful pollination and fertilisation

A simplified sequence; outcomes and timing vary.

Flowers take part in reproduction. Seeds can form after fertilisation.

The service desk sorts the jobs

Use A–D. Connect each part to a function. Explain one connection to another part.

What must happen?	Which part helps?
Water enters from soil	Choose from A–D
Water reaches a leaf	Choose from A–D
Sugars are made in light	Choose from A–D
Seeds form	Choose from A–D

Functional matching; no live plant damage

A repair must address the missing input

Read E and F.

Choose a useful explanation.

Say why an unrelated repair fails.

Which account explains plant nutrition?

Look for both making and absorbing.

- A** Roots absorb water and minerals; green leaves make sugars using light.
- B** Roots eat soil, so leaves have no role.
- C** Flowers pump all water from the soil.

Choose your science route

Match parts and functions.

Explain the connected system.

Review a proposed repair.

Make your own evidence record

Use the shared evidence.

Explain one choice.

Check a label or number.

Check what the evidence can show

Point to the clue you used.

Remove an unsupported claim.

Lundy loop: improve the shared account

Choose how to share.

Hear one evidence-based challenge.

Improve or defend one idea.

Which connection made our explanation stronger?

Keep the useful change

What changed in our account?

Which evidence helped?

Three final checks

E1. Which part absorbs water from soil?

E2. Where do green plants make sugars using light?

E3. What do flowers help the plant do?
