

A record should survive a change of observer

Learning intention

Set up a consistent growth record and use dated repeated measurements to describe change over time.

Keep IDs, dates and units.

Use supplied evidence to see ten days.

Retrieve the measurement rule

1. Where does the height ruler start?
2. What unit is used?
3. Why keep plant IDs?

I set up the record before comparing

Measure the same part, from the same starting level.

Do not include the pot or straighten the shoot by force.

Label the plant. Record date and baseline. Use the same height rule.

I read time before height

Constructed group mean heights

Read the day first. Compare values at the same day. The intervals are not all equal.

I preserve a missing observation

Measured 6 cm A valid height	Not measured Missing Leave a gap; record the reason.	Zero 0 cm A number, not a missing mark.
--	---	--

These are record examples, separate from the complete growth table.

Not measured is not zero. Leave a gap and give the reason.

The timeline evidence desk

Find B1 on day 0 and day 10. Calculate its height change. Check with another reader.

Day	A1 height (cm)	B1 height (cm)
0	3	3
3	4	5
7	5	8
10	6	11

Constructed sample data; individual plants A1 and B1

Keep the differences visible

B1, B2, B3 finish at 11, 12, 10 cm.

Should we change them to match?

Add the leaf-condition record.

B1 starts at 3 cm and ends at 11 cm.

What is its recorded height increase?

A 11 cm

B 8 cm

C 0 cm because one other plant was not measured

Choose your science route

Read one plant's changes.

Plot a dated growth record.

Audit repeated evidence.

Make your own evidence record

Use the shared evidence.

Explain one choice.

Check a label or number.

Check what the evidence can show

Point to the clue you used.

Remove an unsupported claim.

Lundy loop: improve the shared account

Choose how to share.

Hear one evidence-based challenge.

Improve or defend one idea.

What made our growth statement more honest?

Keep the useful change

What changed in our account?

Which evidence helped?

Three final checks

E1. What is a baseline?

E2. A plant changes from 3 to 11 cm. What is its increase?

E3. Is a missing reading the same as zero?
