

1 • Shared evidence: adviser board

The health evidence advisers

Name _____ Date _____

Short paraphrases of NHS and WHO guidance. P-S are fictional proposals: P varied food cards/water; Q adapted optional movement/quiet alternative; R calm routine/smoke-free space; S stop everyone's medicine.

A • Food patterns | NHS

Different food groups supply different nutrients. A varied overall pattern supports the body; a single snack does not define someone's health.

C • Smoke and alcohol | WHO

Tobacco smoke and harmful alcohol use can damage body systems and increase disease risk. Risk is not certainty or a judgement of a person.

E • Rest | NHS

Sleep and rest support daily functioning. Calm routines can help, although people do not control every barrier to sleep.

B • Movement | NHS

Regular suitable activity supports heart, muscle and bone health. Activities can be adapted for access and enjoyment.

D • Medicines | NHS

Medicines can help treat conditions. Directions and side effects matter. Ask a pharmacist or prescriber; do not change treatment in this task.

F • Fictional club brief

Offer choices and respect allergies, culture and access. No purchases or personal health data. The hall and a quiet room are available; food is represented by cards.

W1. Keep, adapt or reject P-S. Give one source-card reason.

W2. Combine two useful proposals. Explain one body effect and an access adjustment.

W3. Repair "Our club guarantees nobody will get ill."

2 • Supported route: choose and explain

Use page 1; no personal health details are needed.

S1. Which supplies a range of nutrients?

- A. A varied overall food pattern
- B. Judging a person from one snack

S2. Complete: Suitable activity can help _____ and _____. Word bank: heart / muscles / guarantee no illness.

S3. What should the club do about prescribed medicines?

- A. Tell everyone to stop
- B. Keep to directions; questions go to a professional

S4. Choose P, Q or R. Explain one body effect and one way to include different needs.

S5. Finish: This plan can support health, but it cannot _____.

3 • Standard route: club recommendation

Use source-card letters to support your reasons.

Factor	Body effect / source card
Diet	
Suitable activity	
Smoke or harmful alcohol use	
Medicines	

N1. Complete the table with a scientific link for each factor.

N2. Recommend two proposals P-R. Explain why and add one access adjustment.

N3. Explain why proposal S should be rejected.

N4. Improve the guarantee poster. Include a routine or rest idea and a limit.

4 • Stretch route: evidence and limits

Write clear science for a mixed group without giving individual medical instructions.

T1. Explain diet, activity and smoke/alcohol effects using source cards.

Distinguish a short-term response from a longer-term risk or benefit.

T2. Design a club plan from P-R with two explicit access adjustments and scientific reasons.

T3. Explain why “all drugs harm” and “medicines never harm” are both inaccurate.

T4. Could a successful club session prove nobody will develop illness? Explain a limit and a better claim.

5 • Exit and reflection

Use the fictional club; no personal disclosure.

E1. Explain one connection between diet and the body.

E2. Explain one connection between activity and the body.

E3. Give one responsible precaution about medicines.

E4. Why is “can support health” different from “guarantees health”?

Reflection. Which access adjustment would improve the club plan?
