

Arrival choices

Previous lesson reminder:

Start with 1 and 2. Try 3 and 4 when ready. Reading and exact scribing are available.

1 Why agree categories before counting?

Support: Use the reminder strip or talk it through with an adult.

My response

2 Which meaning fits settlement?

Support: Choose: A place where people live OR Growth in the share of people living in urban places.

My response

3 Why is a bar chart suitable for land-use categories?

Support: Use the model evidence anchor dataset or read one relevant card together.

My response

4 What if fieldwork data are missing?

Support: Give a reason when ready.

My response

Stretch: use a precise example or explain which detail supports your answer.

Evidence cards

Read, point or listen. Keep the source label with any detail you use.

A Local reference points

The Middlesbrough railway station and the Transporter Bridge are reference points on our digital map. Toggle layers to examine their positions. Town Hall lies beyond this map's southern boundary.

Source: OpenStreetMap place references; approximate labelled coordinates

Limit: These points alone cannot show population density or prove why development happened.

B Reasons places grow

Work, transport and services can attract people and businesses. A growing town may need more homes and infrastructure. Population growth can also occur within existing settlements.

Source: Authored geographical explanation

Limit: A reason is a hypothesis until tested against evidence for a particular place.

C Practice land-use sample

Fictional practice tally: shops 8, homes 12, public services 4, green spaces 6. This is training data only. Replace it with your dated observations for the fieldwork enquiry.

Source: Authored classroom case

Limit: This example does not describe every person or place.

D Contrasting reference place

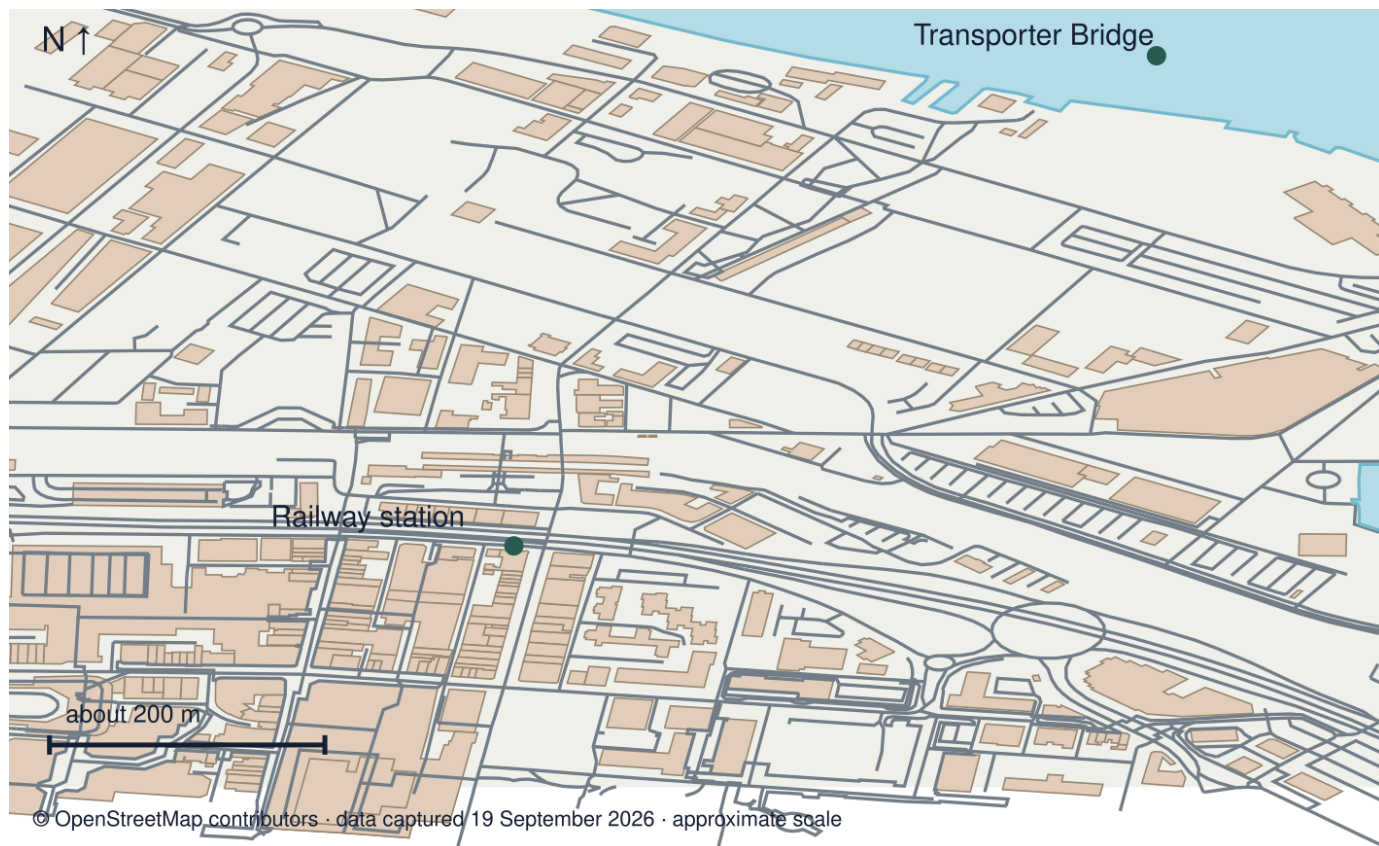

Compare a small centre such as Helmsley with central Middlesbrough at comparable map scales. Record the area, source and date used.

Source: OpenStreetMap linked views

Limit: One sampled street does not represent a whole settlement.

Visual resource

Use this visual with the evidence cards and enquiry questions.

Source: © OpenStreetMap contributors, data captured 19 September 2026, approximate scale. Map references recorded in Sources and checks.

A detail I noticed and what it helps me explain

Data for the enquiry

Fictional land-use practice tally

Category	Count
Shops	8
Homes	12
Services	4
Green spaces	6

Units: Count

Source: Authored training data; replace with dated learner observations for fieldwork assessment

Limit: These are not actual observations of Middlesbrough or Helmsley.

My labelled graph or data notes

Shared investigation

1. Transfer a practice tally into the prepared table.
2. Choose a bar chart and check category names, values and units.

Work with a partner or adult, or use your own table. One person suggests; the other checks the evidence. Swap after one turn. Passing is allowed.

Use the evidence cards and any visual sheet. Follow the two shared steps above, then record one decision.

Our explanation

Support: Use the glossary and one chunk of evidence. Plan the claim and supporting detail before explaining.

Further challenge: Explain why a pie chart or line graph might be less suitable for your particular data.

Supported independent task

Complete this route only. Record fieldwork in a spreadsheet and graph it.

1. Enter your own previous-lesson data into the editable spreadsheet.
2. Create a labelled graph and verify the transfer against the raw tally.
3. Describe a pattern and one limitation of the sample.

Support: Use the glossary and one chunk of evidence. Plan the claim and supporting detail before explaining. Complete the organiser one space at a time. The largest category is ____ with _____. Compared with _____, _____. Our sample is limited because _____.

Data source and date or capture time

Variables units and graph labels

A pattern supported by values

What the data cannot establish

An adult may read or scribe your exact response. They should not choose the answer.

Standard independent task

Complete this route only. Record fieldwork in a spreadsheet and graph it.

1. Enter your own previous-lesson data into the editable spreadsheet.
2. Create a labelled graph and verify the transfer against the raw tally.
3. Describe a pattern and one limitation of the sample.

Support: The largest category is ____ with _____. Compared with ____, _____. Our sample is limited because _____.

Data source and date or capture time

Variables units and graph labels

A pattern supported by values

What the data cannot establish

Check the required evidence and revise one detail.

Stretch independent task

Complete this route only. Record fieldwork in a spreadsheet and graph it.

1. Enter your own previous-lesson data into the editable spreadsheet.
2. Create a labelled graph and verify the transfer against the raw tally.
3. Describe a pattern and one limitation of the sample.
4. Explain why a pie chart or line graph might be less suitable for your particular data.

Support: Choose the evidence independently. Use the frame only if it helps.

Data source and date or capture time

Variables units and graph labels

A pattern supported by values

What the data cannot establish

Explain why a pie chart or line graph might be less suitable for your particular data.

Exit ticket

Choose a response mode. You may give your answers privately to an adult.

Why is a bar chart suitable for land-use categories?

My response

What if fieldwork data are missing?

My response

Support: The largest category is ____ with _____. Compared with ____, _____. Our sample is limited because _____.

Further challenge: Explain why a pie chart or line graph might be less suitable for your particular data.
