

## Arrival choices

Previous lesson reminder:

Start with 1 and 2. Try 3 and 4 when ready. Reading and exact scribing are available.

### 1 Why is a bar chart suitable for land-use categories?

Support: Use the reminder strip or talk it through with an adult.

My response

---

---

---

### 2 Which meaning fits settlement?

Support: Choose: A place where people live OR Growth in the share of people living in urban places.

My response

---

---

---

### 3 Why compare maps at similar scales?

Support: Use the model evidence anchor D or read one relevant card together.

My response

---

---

---

### 4 Can one street represent a whole town without qualification?

Support: Give a reason when ready.

My response

---

---

---

Stretch: use a precise example or explain which detail supports your answer.

## Evidence cards

Read, point or listen. Keep the source label with any detail you use.

### A Local reference points

The Middlesbrough railway station and the Transporter Bridge are reference points on our digital map. Toggle layers to examine their positions. Town Hall lies beyond this map's southern boundary.

Source: OpenStreetMap place references; approximate labelled coordinates

Limit: These points alone cannot show population density or prove why development happened.

### B Reasons places grow

Work, transport and services can attract people and businesses. A growing town may need more homes and infrastructure. Population growth can also occur within existing settlements.

Source: Authored geographical explanation

Limit: A reason is a hypothesis until tested against evidence for a particular place.

### C Practice land-use sample

Fictional practice tally: shops 8, homes 12, public services 4, green spaces 6. This is training data only. Replace it with your dated observations for the fieldwork enquiry.

Source: Authored classroom case

Limit: This example does not describe every person or place.

### D Contrasting reference place

Compare a small centre such as Helmsley with central Middlesbrough at comparable map scales. Record the area, source and date used.

Source: OpenStreetMap linked views

Limit: One sampled street does not represent a whole settlement.

## Visual resource

Use this visual with the evidence cards and enquiry questions.

Source: © OpenStreetMap contributors, data captured 19 September 2026, approximate scale. Map references recorded in Sources and checks.

A detail I noticed and what it helps me explain

---

---

---

## Shared investigation

1. Compare Middlesbrough and Helmsley at similar map scales.
2. Check creator, date, coverage and the question each source can answer.

Work with a partner or adult, or use your own table. One person suggests; the other checks the evidence. Swap after one turn. Passing is allowed.

Use the evidence cards and any visual sheet. Follow the two shared steps above, then record one decision.

Our explanation

---

---

---

Support: Use the glossary and one chunk of evidence. Plan the claim and supporting detail before explaining.

Further challenge: Explain how choosing different map extents could change the contrast.

## Supported independent task

Complete this route only. Compare the local area with a contrasting place using online evidence.

1. Create a comparison using online maps of both named places.
2. Support two contrasts with comparable evidence.
3. Evaluate one source's usefulness and a limitation, recording access date and scale.

Support: Use the glossary and one chunk of evidence. Plan the claim and supporting detail before explaining. Complete the organiser one space at a time. Using comparable areas, \_\_\_\_ shows \_\_\_\_ whereas \_\_\_\_\_. The source is useful for \_\_\_\_ but \_\_\_\_\_.

Evidence from the first example

---

---

---

Evidence from the second example

---

---

---

One similarity

---

---

---

One difference or change

---

---

---

An adult may read or scribe your exact response. They should not choose the answer.

## Standard independent task

Complete this route only. Compare the local area with a contrasting place using online evidence.

1. Create a comparison using online maps of both named places.
2. Support two contrasts with comparable evidence.
3. Evaluate one source's usefulness and a limitation, recording access date and scale.

Support: Using comparable areas, \_\_\_\_ shows \_\_\_\_ whereas \_\_\_\_\_. The source is useful for \_\_\_\_ but \_\_\_\_\_.

Evidence from the first example

---

---

---

Evidence from the second example

---

---

---

One similarity

---

---

---

One difference or change

---

---

---

Check the required evidence and revise one detail.

## Stretch independent task

Complete this route only. Compare the local area with a contrasting place using online evidence.

1. Create a comparison using online maps of both named places.
2. Support two contrasts with comparable evidence.
3. Evaluate one source's usefulness and a limitation, recording access date and scale.
4. Explain how choosing different map extents could change the contrast.

Support: Choose the evidence independently. Use the frame only if it helps.

Evidence from the first example

---

---

---

Evidence from the second example

---

---

---

One similarity

---

---

---

One difference or change

---

---

---

Explain how choosing different map extents could change the contrast.

## Exit ticket

Choose a response mode. You may give your answers privately to an adult.

### Why compare maps at similar scales?

My response

---

---

---

### Can one street represent a whole town without qualification?

My response

---

---

---

Support: Using comparable areas, \_\_\_\_ shows \_\_\_\_ whereas \_\_\_\_\_. The source is useful for \_\_\_\_ but \_\_\_\_\_.

Further challenge: Explain how choosing different map extents could change the contrast.

One thing I changed or want to check

---

---

---
