

Teacher card

Mapping climate zones and hazards / GROW_S2_W01

Outcome: Use atlases and maps to locate climate zones and hazards.

Evidence to retain: F: map-skills check and independent location/pattern question.

Forty minute route

Arrival 4 min; starter 3; model 6; shared task 7; check 2; independent 12; review 3; exit 3.
Pause time is flexible.

Preparation

Choose one independent route. Print the evidence and shared cards, required visual or data sheet, route worksheet and exit. The organiser is one separate A4 page. Keep answers with staff.

Use evidence to explain problems and feasible responses. Avoid asking pupils to carry responsibility for solving global climate change.

Access and regulation

Chunk sources and tasks; pre-teach vocabulary with images. Offer sentence stems, organisers, oral rehearsal and typing. Start with one modelled example; extend through a second source, comparison or supported judgement. Check the learner can begin within two minutes, then fade prompts.

Offer a predictable start, private response and agreed pause. No cold calling or forced personal disclosure. Rejoin at one clearly named next step. Keep teen-appropriate examples and the same learning goal across response modes.

Use sensitive content warnings where relevant. Do not ask for family details or personal experiences.

Assessment

Use questioning and the exit response to decide the next step. Record the learner's individual contribution and the access support used.

UAS: no approved unit code is supplied. Match the learner's evidence to the centre-selected unit and exact criteria before submission. This pack makes no automatic award claim.

Model and answers

Read these pages before teaching. Hide the model during independent assessment.

Question: Are earthquakes caused by being in a warm climate zone?

Evidence: A Zones and events: Broad temperature zones relate to latitude. Near the equator is generally warmer; high latitudes are generally colder. Local climate also depends on altitude and other factors. Earthquakes relate mainly to plate boundaries, not climate zones.

Think aloud: No. They are mainly related to tectonic processes.

Check: What helps explain broad temperature patterns? Latitude, with other influences such as altitude.

Arrival answers

1. Weather patterns over a long period
2. Weather patterns over a long period
3. No. They are mainly related to tectonic processes.
4. Latitude, with other influences such as altitude.

Shared activity reasoning

Exit responses

Are earthquakes caused by being in a warm climate zone? No. They are mainly related to tectonic processes.

What helps explain broad temperature patterns? Latitude, with other influences such as altitude.

Teaching and evidence record

Supplied scheme of work teaching sequence: Model map use and location questions; use a simplified map/data set first, then a challenge layer.

Look for

F: map-skills check and independent location/pattern question.

Accept accurate equivalents, including speech or exact scribing. Check the concept and use of evidence rather than length or handwriting. Record access support separately from content prompting.

BUILD: a concrete example with a reason or demonstrated action. GROW: explain or compare with a relevant detail. LAUNCH: connect evidence and reasoning; use a limitation when the outcome requires it. Keep RE responses non-GCSE.

Media

Original captioned teaching model made for this pack. It demonstrates the supplied reasoning; it is not historical footage, survivor testimony or a documentary. The full transcript and factual source credits are included.

Use manual steps for a calm pace. The silent MP4 has visible captions and a matching text transcript. External archive media is optional and should be previewed before class.
