

Arrival choices

Previous lesson reminder:

Start with 1 and 2. Try 3 and 4 when ready. Reading and exact scribing are available.

1 What happens when fossil fuels are burned?

Support: Use the reminder strip or talk it through with an adult.

My response

2 Which meaning fits climate?

Support: Choose: Weather patterns over a long period OR A process or event with potential to cause harm.

My response

3 Can different stated values lead to caring actions?

Support: Use the model evidence anchor D or read one relevant card together.

My response

4 Do these fictional accounts describe all faith or non-religious groups?

Support: Give a reason when ready.

My response

Stretch: use a precise example or explain which detail supports your answer.

Evidence cards

Read, point or listen. Keep the source label with any detail you use.

A Zones and events

Broad temperature zones relate to latitude. Near the equator is generally warmer; high latitudes are generally colder. Local climate also depends on altitude and other factors. Earthquakes relate mainly to plate boundaries, not climate zones.

Source: Authored map explanation

Limit: Broad bands simplify climate; they are not a detailed climate classification.

B Human influence

Burning fossil fuels adds carbon dioxide. Greenhouse gases slow heat loss to space. Human activity is the main cause of recent global warming.

Source: NASA Causes of climate change

Limit: One local hot or cold day does not establish the global trend.

C Two responses

Reducing fossil-fuel use tackles a cause of warming. Shade, water access and cooler buildings can reduce harm during heat. These responses do different jobs.

Source: Authored examples based on climate mechanisms

Limit: Their suitability depends on the place and the needs of people there.

D Community accounts

Fictional account 1: a faith group explains caring for creation as its reason for planting shade trees.

Fictional account 2: a non-religious residents' group gives human wellbeing as its reason for a cool-room project.

Source: Two authored teaching accounts with explicitly stated values

Limit: These are not reports of real organisations and do not represent every religious or non-religious person.

Visual resource

Use this visual with the evidence cards and enquiry questions.

Source: Natural Earth public-domain outlines, labels simplified. Terms of use:
<https://www.naturalearthdata.com/about/terms-of-use/> (recorded in Sources and checks).

A detail I noticed and what it helps me explain

Shared investigation

1. Read the two fictional community accounts and their stated values.

2. Compare action and motivation separately.

Work with a partner or adult, or use your own table. One person suggests; the other checks the evidence. Swap after one turn. Passing is allowed.

Use the evidence cards and any visual sheet. Follow the two shared steps above, then record one decision.

Our explanation

Support: Read one evidence card together. Highlight a useful detail. Rehearse with: Both _____. Account 1 gives _____ as a reason; account 2 gives _____.

Further challenge: Explain what additional evidence would be needed about a real community's impact.

Supported independent task

Complete this route only. Compare how different communities respond to change with an RE link.

1. Complete a grid comparing the faith group and non-religious residents' group.
2. Explain one similarity and one difference using their stated values.
3. Avoid generalising either account to everyone in a community.

Support: Read one evidence card together. Highlight a useful detail. Rehearse with: Both _____. Account 1 gives _____ as a reason; account 2 gives _____. Complete the organiser one space at a time. Both _____. Account 1 gives _____ as a reason; account 2 gives _____.

Evidence from the first example

Evidence from the second example

One similarity

One difference or change

An adult may read or scribe your exact response. They should not choose the answer.

Standard independent task

Complete this route only. Compare how different communities respond to change with an RE link.

1. Complete a grid comparing the faith group and non-religious residents' group.
2. Explain one similarity and one difference using their stated values.
3. Avoid generalising either account to everyone in a community.

Support: Both _____. Account 1 gives _____ as a reason; account 2 gives _____.

Evidence from the first example

Evidence from the second example

One similarity

One difference or change

Check the required evidence and revise one detail.

Stretch independent task

Complete this route only. Compare how different communities respond to change with an RE link.

1. Complete a grid comparing the faith group and non-religious residents' group.
2. Explain one similarity and one difference using their stated values.
3. Avoid generalising either account to everyone in a community.
4. Explain what additional evidence would be needed about a real community's impact.

Support: Choose the evidence independently. Use the frame only if it helps.

Evidence from the first example

Evidence from the second example

One similarity

One difference or change

Explain what additional evidence would be needed about a real community's impact.

Exit ticket

Choose a response mode. You may give your answers privately to an adult.

Can different stated values lead to caring actions?

My response

Do these fictional accounts describe all faith or non-religious groups?

My response

Support: Both _____. Account 1 gives _____ as a reason; account 2 gives _____.

Further challenge: Explain what additional evidence would be needed about a real community's impact.
