

Teacher card

A hazard case-study report / LAUNCH_S2_W06

Outcome: Complete a hazard case-study report.

Evidence to retain: S: case-study outcome against unit criteria; retain best evidence.

Forty minute route

Arrival 4 min; starter 3; model 6; shared task 7; check 2; independent 12; review 3; exit 3.

Pause time is flexible.

Preparation

Choose one independent route. Print the evidence and shared cards, required visual or data sheet, route worksheet and exit. The organiser is one separate A4 page. Keep answers with staff.

Use non-graphic maps and data. A bigger magnitude does not automatically mean greater harm; exposure and vulnerability matter.

Access and regulation

Pre-teach terminology and model evidence use. Chunk sources and data; provide an initial frame, then reduce it. Maintain normal access arrangements. Extend by weighing limitations, alternative explanations and evidence quality. Adults support access and evidence selection without supplying answers.

Offer a predictable start, private response and agreed pause. No cold calling or forced personal disclosure. Rejoin at one clearly named next step. Keep teen-appropriate examples and the same learning goal across response modes.

Use sensitive content warnings where relevant. Do not ask for family details or personal experiences.

Assessment

Use a different example for shared practice. During independent assessment, keep the agreed reader, scribe, glossary or response mode, but withdraw answer models and record prompts separately.

UAS: no approved unit code is supplied. Match the learner's evidence to the centre-selected unit and exact criteria before submission. This pack makes no automatic award claim.

Model and answers

Read these pages before teaching. Hide the model during independent assessment.

Question: Plan an evidence-based hazard judgement.

Evidence: Read the assessment requirement: S: case-study outcome against unit criteria; retain best evidence.

Think aloud: I connect a stated risk to a response, use a location and data value, then explain a limitation. A list of effects alone does not justify the judgement.

Check: What must accompany the graph or map? A title, source, relevant date, labels or key, and an explanation of what it contributes.

Arrival answers

1. Degrees Celsius.
2. Related to movement of Earth's plates
3. It explains risk, evaluates management and justifies a judgement with evidence.
4. A title, source, relevant date, labels or key, and an explanation of what it contributes.

Shared activity reasoning

Exit responses

What makes the report more than a description of the event? It explains risk, evaluates management and justifies a judgement with evidence.

What must accompany the graph or map? A title, source, relevant date, labels or key, and an explanation of what it contributes.

Teaching and evidence record

Supplied scheme of work teaching sequence: Combine location, causes, effects, risk and management evidence into a structured report. Select a useful map/graph, justify a judgement and evaluate a source or data limitation.

Look for

S: case-study outcome against unit criteria; retain best evidence.

Accept accurate equivalents, including speech or exact scribing. Check the concept and use of evidence rather than length or handwriting. Record access support separately from content prompting.

BUILD: a concrete example with a reason or demonstrated action. GROW: explain or compare with a relevant detail. LAUNCH: connect evidence and reasoning; use a limitation when the outcome requires it. Keep RE responses non-GCSE.

Media

Original captioned teaching model made for this pack. It demonstrates the supplied reasoning; it is not historical footage, survivor testimony or a documentary. The full transcript and factual source credits are included.

Use manual steps for a calm pace. The silent MP4 has visible captions and a matching text transcript. External archive media is optional and should be previewed before class.
