Growth and stem cells

Today I can… ☐ I can distinguish making more cells from cells taking on a specialised job. ☐ I can compare animal growth with plant growth. ☐ I can identify a role for an animal stem cell or a plant meristem.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?] _____

Arrival · Stretch

Look at this week's seedling and skin-repair model. Point to one detail you notice.

An embryonic stem cell can give rise to different specialised cells; meristems at growing plant tips produce new cells. Simplified; not to scale.

Picture colours are illustrative: pale blue stem cell, cream nerve cell, peach muscle cell, red blood cell with a light centre, green plant and orange meristem tips. Colour does not show an observed result.

Growth and stem cells

Today I can… □ I can distinguish making more cells from cells taking on a specialised job. □ I can compare animal growth with plant growth. □ I can identify a role for an animal stem cell or a plant meristem.

Feedback: □ VF □ WS □ I □ NS □ E □ R □ [//] □ [?] _____

Exit ticket · Stretch

Show what you know with a model and explain one reason.

Check today’s success:

I can distinguish making more cells from cells taking on a specialised job.

I can compare animal growth with plant growth.

I can identify a role for an animal stem cell or a plant meristem.

What am I learning? I am learning to explain how cells divide and then take on different jobs for growth and repair.

My feedback was … Name what you heard at Review.

Next I need to … Add the step showing how one newly made cell takes on a specialised role.

How I know: I can show division and differentiation and compare the animal and plant growth routes.

Your teacher hears your answer and uses it to choose our next model, prompt or example.

My confidence: □ 1 □ 2 □ 3
