DNA, genes and chromosomes

Today I can… I can label DNA, a gene and a chromosome in a simple model. I can explain that a gene is a section of DNA with a protein instruction. I can distinguish one chromosome from the genome.

Word page

Word	Meaning	Example
DNA	the molecule that stores genetic instructions	DNA contains the instructions for making proteins.
gene	a section of DNA that codes for a specific protein	The coloured section of the model stands for one gene.
chromosome	a long DNA molecule packaged with proteins in a cell	A chromosome contains many DNA sections, including genes.
genome	the entire DNA of an organism	The genome includes all of the organism’s chromosomes and other DNA.

My language: use words or notes that help you understand. Keep the science meaning.
