Teacher and cover plan · 1–11

1. Outcome

I am learning to calculate genetic probability with a Punnett square and evaluate its limits. Goal and exact weekly binding: Complete a genetic cross (digital Punnett square).

2. Arrival

Private start; hear current responses. Notice A/a tiles.

3. Starter

Ask for a first choice and a reason before revealing the answer.

4. I do

Model one allele from each parent. Keep the four-box chance separate from a family count.

5. We do and worked example

Use the part-done grid and explain one choice.

6. Independent

Choose one route; each pupil keeps their own response. Shared/alternative views do not add time.

7. Checks and routes

Hear both learners separately. Re-model the unsure pupil’s step while the other transfers. No class-percentage threshold.

8. Access

Point/sign/speech/AAC/draw/type/write/exact scribe; pass/pause; any-language planning.

9. TA role

Use the least-to-most prompt ladder. No physical prompts; record prompt and independence.

10. Exit

Each pupil gives the two source exit checks and a next step after real feedback.

11. Feedback

Use genuine VF/WS/I/NS(+)/E/R,//,? only; record real feedback and adaptation on [SYS].

12. Kit, safety, evidence and timing

Timing

Arrival 5 · Starter 3 · I do 5 · We do 7 · We do 2 5 · Independent 8 · Review 4 · Exit 3 = 40 minutes.

Continuation views, alternative tiers and model steps use the same stage clock. Do not add their times. One-minute resets are inside We do, Independent and Review.

Kit and safety

Projector or laptop, printed grids, paper/pens, large prepared A/a tiles, tray, calculator if useful. Staff prepare any cutting. No biological samples. Local risk assessment applies.

No biological samples. Use large prepared paper tiles or pointing. No forced handling or personal disclosure. Staff confirm local risk assessment.

Evidence and coverage

Keep one individual response per learner: grid or values, science reason, feedback and exit. Oral or directed work is valid; use exact scribing. Do not infer grades or [AWARD] evidence from completion.

Success: I can pair one allele from each parent. I can find the aa chance in four squares. I can evaluate why probability does not guarantee an exact count.
