TA brief · support for the pair

Before and during

Agree who supports the chosen route and who holds the other pupil. Swap across the week. Set a private pause signal. No cold calling, forced handling or personal disclosure. Point, sign, speak, draw, type or write. You may pass or pause. An adult can read or scribe your exact words. Plan in any language.

Least prompt first: wait five seconds; point to the relevant margin or value; ask one focused question; model one different example; complete one step together, then try a fresh one alone. No physical prompting. Record the deepest prompt used.

I do: trace one allele from each parent. We do: ask which row or column supplied it. Independent: point to one completed step and ask how to use it next.

For S6, ask which value is predicted and which is observed. Keep the sample total beside every calculation. Do not alter counts to fit the prediction.

Access and regulation

Cognition: keep one completed example, then fade one cue. Communication: rehearse the key word privately; accept AAC or pointing. Sensory/physical: enlarge the grid, use keyboard choices or exact scribing. SEMH: check in before challenge, allow pause and one-step return. EAL: plan in any language while keeping reasoning routes open.

Follow the individual support plan. Re-enter at the last completed step with one small choice. Do not collect evidence during distress.

TA brief · feedback and handoff

SPACE: offer time, access and a private first response. VOICE: pupil chooses a mode or passes. AUDIENCE: adult repeats the actual meaning back. INFLUENCE: pupil chooses a real next change or explains why to keep the answer.

Use actual VF · WS · I · NS(+) · E · R · // · ? only. Record deepest prompt and independence separately. R follows a judged response to the next step, never an automatic click. E is an actual curriculum observation. A real self-edit is //; ? asks for a read-back.

Retain each pupil's own grid, calculation, explanation and exit response. Put valid spoken/practical/photo evidence against SCI-LAUNCH-A2-W05-L3 on [SYS]. No pupil data is stored in the HTML.

Handoff: criteria met, misconception, first and revised response, prompt level, valid mode, independence, adaptation and reason, actual feedback code, next action. Link genuine evidence to personal education, health and care targets on [SYS].

Next step: check one quarter of a fresh total and explain chance before the Week 6 research on a genetic condition. Do not require personal medical disclosure.

No biological samples. Use large prepared paper tiles or pointing. No forced handling or personal disclosure. Staff confirm local risk assessment.

Teacher may shorten secure rehearsal if needed. Preserve each pupil's evidence and exit. Record any coverage moved to the next lesson. Date/Version _____.
