Staff answers · shared work

Starter

A traceable note identifies the source, the specific claim and how it answers the question.

Worked example

Paraphrase the idea “severity varies” without making a prediction about an individual.

Locate the relevant source statement.

Keep its meaning: people can have different effects or severity.

Write: “The effects are not identical for every person” (Source B).

Do not add an unsupported claim about who will be affected most.

Shared evidence task

CFTR: Source B, but many variants and individual effects vary. Thick mucus: Source A, but it does not predict each individual. Severe symptoms for one person: not supported; leave this claim out or state the gap.

Card placements

Card	Group
CFTR is involved in cystic fibrosis	Supported by the supplied sources
Two carriers have a 25% model chance each pregnancy	Supported by the supplied sources
Thick mucus can affect lungs and digestion	Supported by the supplied sources
Every affected person has identical symptoms	Not established by these sources
The next child is affected because the previous three were not	Not established by these sources
We can diagnose someone from this classroom model	Not established by these sources

Staff answers · Supported

Arrival

1. Attribution: The publisher/title or source identifier and the relevant location/link.

2. Paraphrase: No; it means expressing the meaning accurately in your own words.

3. Model: 25%.

4. Limit: No.

Independent / application

1. Trace: B for CFTR; A for mucus; individual severe symptoms are not supported.

2. Paraphrase: Accept accurate paraphrases with correct A/B attribution, preserving probability and variation.

3. Compare: Both explain inherited CF; A emphasises public effects/care, while B gives CFTR and inheritance detail. This is not necessarily a contradiction.

Two-check exit

1. Trace: It is linked to an identifiable source and the relevant statement or section.

2. Compare: No. Different audiences may explain the same evidence at different levels of detail.

Staff answers · Aspire

Arrival

1. Attribution: The publisher/title or source identifier and the relevant location/link.

2. Paraphrase: No; it means expressing the meaning accurately in your own words.

3. Model: 25%.

4. Limit: No. Accept a scientifically correct reason that uses the relevant model or evidence.

Independent / application

1. Trace: B for CFTR; A for mucus; individual severe symptoms are not supported.

2. Paraphrase: Accept accurate paraphrases with correct A/B attribution, preserving probability and variation.

3. Resolve a conflict: Check the actual supporting studies and whether the claim agrees with reliable reviewed clinical guidance; identify commercial purpose and avoid repeating a guarantee without adequate evidence.

Two-check exit

1. Trace: It is linked to an identifiable source and the relevant statement or section.

2. Resolve a conflict: Check the actual supporting studies and whether the claim agrees with reliable reviewed clinical guidance; identify commercial purpose and avoid repeating a guarantee without adequate evidence.

Staff guidance · pair, access and feedback

The pair works with a shared model and individual evidence. One explains and one asks for the clue, then they swap. Hear both independent reasons before moving on. Re-model an unsure learner's step and use a fresh parallel question while the other continues.

No cold calling or forced public reading. A learner may pass. Point, sign, speak, draw, type, write, direct an adult or use exact scribing. Read the task exactly when needed. Keep the science challenge and allow planning in any language. EAL is language, not SEN.

Use a stable tray or large cards and the agreed accessible input. Give processing time. Agree a quiet supervised pause and a brief first–then cue. Re-enter at the last completed step. Do not gather evidence while a learner is distressed.

Record actual VF, WS, I, NS(+), E, R, // and ? only when they occur. Keep deepest adult prompt separate from the pupil response. A real adult receives and names back the science. R requires the pupil's response to an NS(+) next step and real Audience; never award it for a click or completion. Keep the pupil's own wording and own-colour response.

Staff guidance · evidence and handover

Keep each first response, result or labelled explanation, the feedback and the pupil's edit or justified decision to keep it. E requires an observable curriculum action on [SYS]. Use SCI-LAUNCH-A2-W06-L2 for written, spoken, practical or photographic evidence. Record prompt level, response mode, support faded and what was independent.

At Independent agree actual adult roles and swap across the week. If one adult attends, use the actual staffing plan. Follow individual support and behaviour plans. Record access, regulation and curriculum actions against the learner's own targets without recording a diagnosis as evidence.

If behind, preserve each source-linked claim, each learner's response and the safety teaching. After a secure check shorten repeated oral rehearsal. Record any change, reason and coverage impact. Pass checked understanding, deepest prompt and unresolved errors to Week 7. Do not replace incomplete individual work with a group product.

Evaluation: date taught; delivered as planned; criteria met; actual adaptations and reasons; changes to the scheme and coverage; evidence banked. Source evidence mapping remains [AWARD] [QUAL]; no unit or qualification award is claimed by this lesson.

Staff · sources and lesson scope

Weekly outcome: Research a genetic condition online; present.

Exact goal: Paraphrase and compare source evidence, keeping supported claims separate from inference and uncertainty.

Source: Launch/W14-W15_2026-27/SCI_L_W14L2_Genetic_Condition_Source_Evidence_Explore.html; revision c4ca8ffab98e6186a9ef2fed3921644b177f0d6d.

Workbook: _authoring/science_2026-27/_toolchain/scheme_references/LAUNCH_SOW.xlsx; LAUNCH Weekly - Autumn B44 Aut2·W6; C44 above.

The workbook says online. Preserve the accepted prepared offline source-card route; teacher-opened full sources are optional, with no automatic external loads and no pupil phone required.

Source A: NHS, Cystic fibrosis. https://www.nhs.uk/conditions/cystic-fibrosis/

Source B: NHS Genomics Education, Cystic fibrosis. https://www.genomicseducation.hee.nhs.uk/genotes/knowledge-hub/cystic-fibrosis/

Both pages checked 24 October 2026. Use the source cards for classroom access, with the full source for checking. Do not diagnose or invite personal medical disclosure.

The two NHS sources serve different audiences and are not fully independent. Current Source A does not explicitly state the salt/water mechanism; the classroom card does not attribute that sentence to it.

No [AWARD] or [QUAL] assessment alignment is newly asserted. Career link: a genetic counsellor explains chances and limits with care.
