Source A · NHS public information

Paraphrase accurately and label the source.

Compare agreement and differences in emphasis.

Remove or qualify unsupported individual predictions.

Cystic fibrosis is inherited. Altered gene copies from both parents cause thick, sticky mucus. This can affect the lungs and digestion. Treatments can help ease symptoms. Care depends on the person.

This source gives a public overview. It does not tell us one person’s exact symptoms or future.

Publisher: NHS. Title: Cystic fibrosis. Use the Causes, Symptoms and Treatments sections.

Source A full page: ask an adult to use the link in the page tools or staff notes.

Accessed 24 October 2026. Page reviewed 28 February 2025. This is a classroom paraphrase, not a quotation. The full page can be opened by the teacher.

Source B · NHS Genomics Education

Paraphrase accurately and label the source.

Compare agreement and differences in emphasis.

Remove or qualify unsupported individual predictions.

Cystic fibrosis usually involves harmful variants in both copies of CFTR. This is an autosomal recessive condition. A carrier has one changed copy in this model. The effects can vary.

Two carrier parents: each pregnancy	Model chance
Child has the condition	1 in 4 = 25%
Child is a carrier	2 in 4 = 50%
Child inherits neither changed copy	1 in 4 = 25%

These chances apply each time. They do not predict a set family count or the severity of one person’s symptoms.

NHS Genomics Education Programme. Page: Cystic fibrosis. Read Genomics, then Inheritance and genomic counselling. Use these parts to check the gene and how changed copies pass to a child.

Source B full page: ask an adult to use the link in the page tools or staff notes.

Checked 24 October 2026. This card uses our own words. It is not a quote. We have not given a review date for this source.

Sources · purpose and limits

Paraphrase accurately and label the source.

Compare agreement and differences in emphasis.

Remove or qualify unsupported individual predictions.

Both sources are NHS sources. They have different readers and are not wholly independent publishers.

Source A	Source B
Public information about effects and care	More detail about genes and inheritance

Both support inherited cause. More detail does not by itself mean a conflict. Check the actual claim, source section, date and purpose.

Read the source, cover it, explain the meaning in your own words, then check it. Keep the source label beside each claim.

Use fictional cases. Do not ask for family details or predict a person’s future. Inheritance and infection precautions are separate matters.

Arrival · Aspire

Paraphrase accurately and label the source.

Compare agreement and differences in emphasis.

Remove or qualify unsupported individual predictions.

Four checks. Point, speak, sign, draw, write or direct an adult. An adult may read or scribe your exact words. Choose one route; do not complete all three.

1. Attribution

What should you record beside a source claim?

Help: Who says it and where it can be found.

2. Paraphrase

Does paraphrase mean changing just one word?

Help: Explain the meaning in your own wording.

3. Model

Two parents are carriers. What is the chance that their child has CF each time?

Help: Use the one-in-four model.

4. Limit

Does the one-in-four chance tell us how severe one person’s symptoms will be? Give a reason.

Help: Inheritance and severity are different questions.

My response: _____

Independent · Aspire

Paraphrase accurately and label the source.

Compare agreement and differences in emphasis.

Remove or qualify unsupported individual predictions.

Point, speak, sign, draw, write or direct an adult. An adult may read or scribe your exact words. Choose one route; do not complete all three.

1. Trace

Complete the claim–evidence ledger for all three claims.

Help: Use A, B or not supported.

2. Paraphrase

Write two accurate source-linked sentences in your own words.

Help: Say “Source A explains…” without pretending it is a quote.

3. Resolve a conflict

A page sells a product. It claims that it will cure everyone. What checks would you make before using this claim?

Help: Check the proof, who wrote it, why and when. Check a trusted health source too.

My response: _____

One partner explains. The other asks for the clue. Swap roles. Keep your own first answer, feedback and next step.

Use one route for the full 10 minutes. Keep your own record and response.

A claim–evidence ledger

Paraphrase accurately and label the source.

Compare agreement and differences in emphasis.

Remove or qualify unsupported individual predictions.

Trace each claim. Give A, B or not established. Add the precise source section, a paraphrase and a limit. Do not invent a quotation.

Claim	Source / section	Limit
CF involves altered CFTR copies	_____	_____
Thick mucus can affect breathing	_____	_____
A particular person will have severe symptoms	_____	_____

My first claim in my own words: _____

Its source and the line I used: _____

My second claim in my own words: _____

Its source and the line I used: _____
