Staff answers · shared work

Starter

An honest boundary protects accuracy and respect. Not every question can be answered from the chosen sources.

Worked example

Answer an audience question that is outside the source evidence.

Listen to the actual question.

Identify which part your sources do and do not address.

Say: “These sources explain general inheritance, not that person’s future.”

Name the missing evidence without inventing a confident answer.

Shared evidence task

A good response links two altered CFTR alleles with recessive inheritance, explains one effect such as thick mucus, identifies A and B appropriately and does not predict individual severity. Response mode is not part of the science judgement.

Card placements

Card	Group
A bounded question	Keep in my work
An accurate inheritance model	Keep in my work
Visible source labels	Keep in my work
A stated uncertainty	Keep in my work
Private details about a classmate	Remove or change
A guaranteed prediction for one person	Remove or change

Staff answers · Supported

Arrival

1. Focus: How the condition is inherited and how it can affect the body.

2. Source: Give a clear source label/title/link connected to the claim.

3. Uncertainty: “These sources do not establish that; I would need further evidence.”

4. Choice: No.

Independent / application

1. Create: Accept a coherent question, inheritance model, biological effect, sources and uncertainty.

2. Present: Judge biological accuracy, traceable evidence and a clear limitation; not confidence, eye contact or amount of writing.

3. Respond: No. Symptoms and severity vary; the classroom sources do not predict an individual’s exact experience.

Two-check exit

1. Explain: For example: cystic fibrosis usually involves altered CFTR copies inherited from both parents. This affects salt/water movement and can lead to thick mucus affecting lungs and digestion.

2. Qualify: For example, these sources cannot predict an individual’s exact symptoms or severity.

Arrival

1. Focus: How the condition is inherited and how it can affect the body.

2. Source: Give a clear source label/title/link connected to the claim.

3. Uncertainty: “These sources do not establish that; I would need further evidence.”

4. Choice: No. Accept a scientifically correct reason that uses the relevant model or evidence.

Independent / application

1. Create: Accept a coherent question, inheritance model, biological effect, sources and uncertainty.

2. Present: Judge biological accuracy, traceable evidence and a clear limitation; not confidence, eye contact or amount of writing.

3. Refine for audience: For example: “CF is usually inherited when a child receives an altered CFTR copy from each parent; effects vary between people” (Source B).

Two-check exit

1. Explain: For example: cystic fibrosis usually involves altered CFTR copies inherited from both parents. This affects salt/water movement and can lead to thick mucus affecting lungs and digestion.

2. Refine for audience: For example: “CF is usually inherited when a child receives an altered CFTR copy from each parent; effects vary between people” (Source B).

Staff guidance · pair, access and feedback

The pair works with a shared model and individual evidence. One explains and one asks for the clue, then they swap. Hear both independent reasons before moving on. Re-model an unsure learner's step and use a fresh parallel question while the other continues.

No cold calling or forced public reading. A learner may pass. Point, sign, speak, draw, type, write, direct an adult or use exact scribing. Read the task exactly when needed. Keep the science challenge and allow planning in any language. EAL is language, not SEN.

Use a stable tray or large cards and the agreed accessible input. Give processing time. Agree a quiet supervised pause and a brief first–then cue. Re-enter at the last completed step. Do not gather evidence while a learner is distressed.

Record actual VF, WS, I, NS(+), E, R, // and ? only when they occur. Keep deepest adult prompt separate from the pupil response. A real adult receives and names back the science. R requires the pupil's response to an NS(+) next step and real Audience; never award it for a click or completion. Keep the pupil's own wording and own-colour response.

Staff guidance · evidence and handover

Keep each first response, result or labelled explanation, the feedback and the pupil's edit or justified decision to keep it. E requires an observable curriculum action on [SYS]. Use SCI-LAUNCH-A2-W06-L3 for written, spoken, practical or photographic evidence. Record prompt level, response mode, support faded and what was independent.

At Independent agree actual adult roles and swap across the week. If one adult attends, use the actual staffing plan. Follow individual support and behaviour plans. Record access, regulation and curriculum actions against the learner's own targets without recording a diagnosis as evidence.

If behind, preserve each source-linked claim, each learner's response and the safety teaching. After a secure check shorten repeated oral rehearsal. Record any change, reason and coverage impact. Pass checked understanding, deepest prompt and unresolved errors to Week 7. Do not replace incomplete individual work with a group product.

Evaluation: date taught; delivered as planned; criteria met; actual adaptations and reasons; changes to the scheme and coverage; evidence banked. Source evidence mapping remains [AWARD] [QUAL]; no unit or qualification award is claimed by this lesson.

Staff · sources and lesson scope

Weekly outcome: Research a genetic condition online; present.

Exact goal: Present an accurate, source-linked explanation and respond to a question without exceeding the evidence.

Source: Launch/W14-W15_2026-27/SCI_L_W14L3_Genetic_Condition_Presentation_Do.html; revision c4ca8ffab98e6186a9ef2fed3921644b177f0d6d.

Workbook: _authoring/science_2026-27/_toolchain/scheme_references/LAUNCH_SOW.xlsx; LAUNCH Weekly - Autumn B44 Aut2·W6; C44 above.

The workbook says online. Preserve the accepted prepared offline source-card route; teacher-opened full sources are optional, with no automatic external loads and no pupil phone required.

Source A: NHS, Cystic fibrosis. https://www.nhs.uk/conditions/cystic-fibrosis/

Source B: NHS Genomics Education, Cystic fibrosis. https://www.genomicseducation.hee.nhs.uk/genotes/knowledge-hub/cystic-fibrosis/

Both pages checked 24 October 2026. Use the source cards for classroom access, with the full source for checking. Do not diagnose or invite personal medical disclosure.

The two NHS sources serve different audiences and are not fully independent. Current Source A does not explicitly state the salt/water mechanism; the classroom card does not attribute that sentence to it.

No [AWARD] or [QUAL] assessment alignment is newly asserted. Career link: a genetic counsellor explains chances and limits with care.
