Teacher and cover plan — Surface texture skills lab

Pathway: BASE · Week 3 Part 2 · Big question: How can we use foil and dry brush marks to make card look like old metal?

Learning goals and studio kit

• Press lines. Bolt dots into soft craft foil over card.

• Brush a little pale paint lightly across dark bumpy card.

• Stick your best two metal-look squares into your studio log.

Studio kit: Soft pressing foil squares, foam mats, blunt wooden styluses, black card squares, chrome/white acrylic paint, stiff dry brushes

Arrival and starter

Arrival: Look at the two sample squares on the tray. Which one looks shiny like metal?

Starter question: Why do we wipe most of the paint off the brush on a paper towel. First dry brushing?

Teacher model (I do)

Step 1: Press foil on a soft mat: I put my foil square on a foam pad. Draw beam lines and bolt dots with a blunt stick.

Step 2: Load and wipe the dry brush: I dip the tip of a stiff brush in chrome paint. Then scrub most of it off on kitchen roll.

Step 3: Skim across dark ridged card: I sweep the brush lightly across black ridged card so only the top ridges turn chrome.

Practice routes (Supported / Independent / Aspire)

Supported: One pressed foil square. One dry-brushed card square mounted neatly.

Independent: Three texture squares done. Labelled on the lab sheet.

Aspire: Embossed foil. Two-tone weathered dry-brush tile with studio note.

TA and cover notes

TA focus: Fold sharp edges of craft foil squares back with masking tape beforehand so edges are smooth and safe to hold.

Staff prep: Staff preparation only: review a short demonstration of safe foil pressing on EVA foam and dry-brush skimming.
