Staff answers & diagnostic guide — One skill, three tries, one log entry

Pathway: TRACK · Week 2 Part 1 · Big question: How does repeating one studio skill across three controlled trials build measurable control?

Starter answer & explanation

Question: What is the most important step between finishing Trial 1 and starting Trial 2?

Correct: Pausing for ten seconds to name ONE specific adjustment you will test next — Yes. Naming the adjustment turns repetition into deliberate practice.

Guided team check (We do) answers

Q1: Why must we keep Trial 1 visible on our studio sheet even if it looks rough? -> Trial 1 is the baseline evidence that proves how much your control grew by Trial 3 (Correct. Studio logs value honest progression over hiding early attempts.)

Q2: When building tone with cross-hatching, how do you make an area darker without tearing the paper? -> Add another layer of closely spaced lines at a slight angle rather than gouging hard (Yes. Layered cross-hatching builds rich darks safely.)

Q3: What makes a studio log comment useful for your next lesson? -> Naming the exact hand adjustment that worked (e.g. 'Holding the pencil further back gave smoother

mid-tones') (Spot on. Specific technical notes act as a recipe you can use again.)

Exit check answer

Question: Why do we write a quick adjustment note between Trial 1 and Trial 2?

Correct: So we know exactly what change in pressure or spacing we are testing in the next box — Yes. Naming the fix before you start Trial 2 builds rapid control.
