Tier pack: Independent route — Studio skills and safe workshop practice

Pathway: TRACK · Week 2 Part 2 · Big question: How do we score, cut, and laminate heavy card safely to build rigid architectural relief?

Independent route studio steps

Step 1: Measure and cut parallel girder strips using a cutting mat and safety ruler.

Step 2: Build a three-level relief truss using laminated primary beams, recessed cross-bracing, and corner gussets.

Step 3: Prime the assembled relief in dark iron grey and once touch-dry, skim the top edges with graphite or chrome.

Step 4: Complete the studio safety and technique checklist in your log.

Success check

Three-level laminated truss relief primed, highlighted, and logged.

Key words helper

• score: To press or lightly indent a line along card so it folds or snaps cleanly.

• laminate: To glue two or more layers of card together for extra thickness and strength.

• gusset: A small angled corner plate that reinforces where two beams meet.

• safety ruler: A ruler with a raised finger guard used to guide straight cuts safely.

• primer: A base coat of paint or wash that unifies mixed card surfaces.

Review checklist

[ ] Check that all tools are docked safely in the central table block and counted.

[ ] Tilt your primed relief panel toward the light to inspect the depth of your laminated beams.

[ ] Place your board flat on the drying rack.
