Tier pack: Aspire route — Independent surface and structure challenge

Pathway: TRACK · Week 3 Part 2 · Big question: How can we combine collagraph relief, foil embossing, and monochromatic wash in an architectural panel?

Aspire route studio steps

Step 1: Engineer a three-depth structural panel integrating mesh, corrugated fluting, laminated trusses, and detailed foil embossing.

Step 2: Build a layered patina using dark slate wash in recesses, warm iron-oxide mid-tone, and directional chrome highlights on upper-left edges.

Step 3: Write a concise studio critique analysing how surface texture and tonal contrast work together.

Success check

Multi-depth relief panel with directional oxide/chrome patina and written critique.

Make-it studio planner

Choose your structural focus, texture combination, and patina finish.

Options: Riveted girder intersection, Arched viaduct bay, Triangulated tower crown, Layered dockside wall

Review checklist

[ ] Hold your panel at an angle to the light and check for dark crevices, mid-tone plates, and bright ridges.

[ ] Ensure your technical evaluation note is completed in your studio log.

[ ] Place your panel flat on the drying rack.
