Pupil studio resources & worksheet — Creative practitioners and studio roles

Pathway: TRACK · Week 5 Part 2 · Big question: How do sculptors, printmakers, and exhibition designers turn raw materials into public artworks?

Arrival check

Imagine a council wants a 10-metre steel sculpture for a park. Does the sculptor start welding 10-metre steel beams on day one?

[ ] No, they sketch ideas and build a small tabletop card or wire maquette first

[ ] They check how the shape looks from every side before ordering heavy metal

[ ] A team of engineers and fabricators helps build the final giant piece

Starter visual cues

Stage 1 (Site & Brief): Observing the built environment, history, and audience sightlines.

Stage 2 (Maquette & Swatches): Building small card/foil relief models and testing surface patina.

Stage 3 (Fabrication): Scaling up with engineers, welders, or master printmakers.

Stage 4 (Curation & Install): Lighting, mounting, and writing public interpretation panels.

Vote: How does the cardboard and foil relief panel you built in Weeks 2-4 connect to professional sculpture practice?

Studio practice planner

Connect a creative studio role and workflow stage to your own practical project.

Shapes/Focus: Role: Structural sculptor, Role: Collagraph printmaker, Role: Exhibition designer, Role: Surface fabricator

Tools/Methods: Method: Tabletop maquette, Method: Surface patina swatch, Method: Laminated relief plate, Method: Directional lighting

Exit ticket

Why do sculptors and architects build a small tabletop 'maquette' before fabricating a full-size structure?

[ ] To test 3D balance, shadow contrast, and materials safely at small scale first

[ ] Because full-size structures are invisible

[ ] To use up old newspaper
