Knowledge organiser (SUMMIT) — Deliberate practice and documented progression

Pathway: SUMMIT · Week 2 Part 1 · Big question: How do we use structured three-stage deliberate practice to master a target skill and document progression?

Core studio focus

Family: Identity and studio log

Big question: How do we use structured three-stage deliberate practice to master a target skill and document progression?

• Take your #1 target from your Week 1 audit and design a three-stage deliberate practice sequence.

• Execute three progressive studies testing specific variables (hand pressure, cross-contour direction, or wash dilution).

• Write technical diagnostic annotations between each study documenting how you corrected errors and refined control.

Essential vocabulary

• deliberate practice: Repeating a specific skill while consciously isolating and fixing one technical variable each time.

• cross-contour: Curved shading lines that wrap around the 3D surface of a form to show volume.

• variable: The single factor you change between trials (such as brush water load, line spacing, or pencil angle).

• diagnostic note: A brief analytical comment between trials identifying what worked and what to adjust next.

• tonal range: The full span of values from deepest core shadow through mid-tones to crisp highlight.

Three-step studio method

Step 1: Execute study 1 and write Diagnostic 1: I complete Study 1 of my symbolic vessel in ink wash, then note: 'Issue: harsh tide mark in mid-tone. Adjustment: damp-brush feathering.'

Step 2: Apply the variable fix in Study 2: In study 2, I use a clean damp brush to feather the edge of the wet wash, eliminating the harsh step.

Step 3: Resolve full 5-value range in Study 3: In study 3, I combine the feathered mid-tone with a deep second glaze in the core shadow and annotate the progression.
