Pupil studio resources & worksheet — Deliberate practice and documented progression

Pathway: SUMMIT · Week 2 Part 1 · Big question: How do we use structured three-stage deliberate practice to master a target skill and document progression?

Arrival check

Look at your Week 1 baseline audit. What separates 'mindless repetition' from 'deliberate studio practice'?

[ ] In deliberate practice, you diagnose the exact weakness after Trial 1 and change one specific variable in Trial 2

[ ] You record the technical adjustment right on the sheet between each study

[ ] By Trial 3 you combine full five-value tone with crisp edge control

Starter visual cues

Study 1 (Baseline variable Test — 7 mins): Test your target skill on a 3D symbolic form; stop and diagnose.

Diagnostic bridge 1 -> 2: Name the exact variable adjustment (e.g. 'Shift from flat hatching to curved cross-contour lines').

Study 2 (Controlled adjustment — 7 mins): Execute with the adjusted variable; diagnose tonal range.

Study 3 (Mastery resolution — 8 mins): Full five-value resolution combining form, cast shadow, and crisp edge.

Vote: Why do we change only ONE technical variable at a time between Study 1 and Study 2?

Studio practice planner

Set up your three-stage deliberate practice sequence.

Shapes/Focus: Focus: Cross-contour graphite, Focus: Feathered ink wash, Focus: Layered pastel blending, Focus: Precision collage tone

Tools/Methods: Variable 1: Stroke curvature, Variable 1: Brush water ratio, Variable 1: Layer pressure, Variable 1: Edge transition

Exit ticket

How does cross-contour shading make a drawn object look three-dimensional?

[ ] The shading lines curve to follow the surface direction of the form, showing its roundness and volume

[ ] It uses only straight horizontal ruler lines

[ ] It leaves the inside of the shape completely blank
