Food Chain Investigation · Knowledge Organiser

Learning goal: I can build a food chain starting with a plant and point the arrows the right way.

Today I Can

I can start a food chain with a green plant (producer).

I can point each arrow from the food to the animal that eats it.

I can say that the arrow means 'is eaten by' (food goes to).

Must-Know Words

food chain: a line of living things that shows who eats what

producer: a green plant at the start of a food chain that makes its own food

consumer: an animal in a food chain that eats plants or other animals

is eaten by: what the arrow (->) means in a food chain

Core Science Steps

First, find the green plant (producer): grass in Chain 1, or oak leaf in Chain 2.

Next, place the animal that eats the plant and draw the arrow pointing to that animal.

Finally, place the second animal and read the whole line using 'is eaten by'.

Keep the Science Clear

Check three things every time: 1) Plant at the start, 2) Organisms in eating order, 3) Arrows pointing to the eater.

A 3-card chain shows one feeding path; in the wild, animals often eat more than one kind of food.
