Grip or glide? The surface challenge · Tier Pack · Supported

Learning goal: I can explain how friction acts between touching surfaces and judge when grip or glide is useful.

Supported Route (Book First)

Add a friction arrow opposite the motion arrow. Finish one sentence explaining how brake pads help.

Help: The box slides right, so friction points __.
Brake pads grip the wheel to help it __.

Optional Make It · Supported

Make a friction arrow slider

Cut a paper arrow labelled FRICTION. Place it opposite the motion arrow on your diagram card. Complete your book labels too.

Word Help

friction: a contact force between two surfaces that slide or try to slide past each other

contact force: a force that acts only when two objects or surfaces touch

grip: high resistance to slipping between two touching surfaces

lubrication: adding oil or grease to reduce unwanted friction between moving parts

Exit Check

Which way does friction point when a block slides right?
