Friction: Test the Surfaces · Tier Pack · Supported

Learning goal: I can compare friction on different run-out surfaces using repeated measurements and a controlled setup.

Supported Route (Book First)

Compare Surface A (46 cm, 48 cm) and Surface B (24 cm, 26 cm). Circle the shorter distance each time and name the grippier surface.

Help: 24 cm is shorter than 46 cm. Surface __ stopped the block sooner, so it had more __.

Optional Make It · Supported

Make a shorter-distance pointer card

Circle the shorter distance in Trial 1 and Trial 2 on a comparison slip. Stick or copy the result into your book.

Word Help

run-out surface: the flat test surface at the bottom of the ramp where the block slows and stops

stopping distance: how far the block travels along the run-out surface before stopping, in cm

control variable: a factor kept the same so the surface comparison is fair

repeat trial: running the same surface test more than once to check consistency

Exit Check

Which stopping distance shows more friction: 24 cm or 46 cm?
