Mechanisms · Tier Pack · Independent

Learning goal: I can identify levers, pulleys, and gears and explain how they let a small effort move a heavy load.

Independent Route (Book First)

Draw and label a lever (Load, Pivot, Effort), classify four everyday tools as lever, pulley, or gear, and explain how a lever multiplies force.

Help: A lever uses a __ to turn a small __ force pushed over a long distance into a larger force on the __.

Optional Make It · Independent

Make a 3-tab Mechanism Reference Card

Fold a 3-tab card for Lever, Pulley, and Gear. Draw and label Effort, Pivot/Wheel/Teeth, and Load on each tab, and write your explanations in your book.

Word Help

mechanism: a simple machine such as a lever, pulley, or gear that changes a force

lever: a stiff bar that turns on a pivot to lift or move a load

pivot: the fixed resting point (fulcrum) that a lever turns around

pulley: a grooved wheel with a rope that changes the direction or size of a pull

Exit Check

Name the fixed point that a lever turns around.

Where should the pivot be placed to make lifting a heavy load easier?
