

Animals get food by eating

Today I can... ☐ say that plants make their own food ☐ say that animals must eat to get theirs

☐ put a simple food chain in the right order

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Animals get food by eating

I can explain that animals get food by eating, and plants can make their own food.

Word help

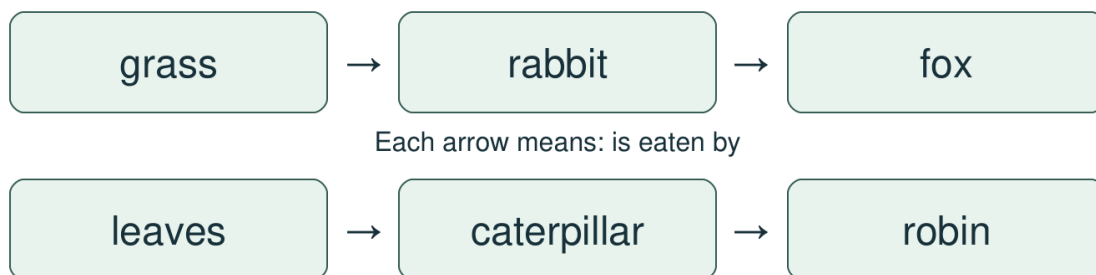

Words for this lesson

producer : here, a green plant that makes food using light

consumer : an animal that eats to obtain food

food chain : a model of linked feeding relationships

energy : what passes along the chain when something is eaten

Follow these ideas

- A green plant is a producer: it makes food using light. An animal is a consumer: it eats to obtain food.
- Read grass → rabbit → fox: grass is eaten by the rabbit; the rabbit can be eaten by the fox.
- Read leaves → caterpillar → robin in the same way. The arrow points from food to its eater.

Keep the claim careful

A simple chain shows selected links. It is not a full food web and cannot predict an exact number of animals.

Show it

- I can say that plants make their own food.
- I can say that animals must eat to get theirs.
- I can put a simple food chain in the right order.
