Animals get food by eating

Today I can... ☐ say that plants make their own food ☐ say that animals must eat to get theirs
☐ put a simple food chain in the right order

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Arrival · four short questions

1. Where does a rabbit get its food: eating grass or making it?
2. Name one plant in a food chain.
3. Link to today: Name one job food does in a body.
4. Do muscles pull or push bones?

Starter

A plant and rabbit both need energy. Which can make its own food?

Exit ticket

1. Point to the producer in grass → rabbit → fox.
2. Explain what one arrow means.
3. Explain why our chains start with a plant and name one model limit.

Method strip

1. Set out only the printed organism cards and paper arrows; do not handle or feed real organisms.
2. Match the animal-food pairs and ask the adult to check the card setup. STOP AND CHECK with the adult before continuing.
3. Build both supplied chains with arrows from food to eater.
4. Repair the reversed arrow, then cover one plant card.
5. Record one feeding-link observation and explain one possible effect of fewer plants, with one model limit.

Animals get food by eating

Today I can... ☐ say that plants make their own food ☐ say that animals must eat to get theirs
☐ put a simple food chain in the right order

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Animals get food by eating · You do routes

Work in your book. Staff mark I, S or C beside this task.

Independent

Match six supplied animal-food pairs, then build both chains. Add producer/consumer labels; repair an arrow and explain one possible effect of fewer plants.

Help: The ___ gets food by eating ___. Fewer ___ could mean ___ because ___.

Supported

First match four animal-food pairs using the clues. Then build the grass and leaf chains with two choices at a time; fix a wrong arrow.

Help: Read each worded arrow: ___ is eaten by ___.

Choice

Match rabbit to grass / stone; fox to rabbit / leaves; caterpillar to leaves / stone; robin to caterpillar / leaves. Order fox, grass, rabbit and robin, leaves, caterpillar into two chains. Choose the producers: plants / animals. Repair a reversed arrow: food to eater / eater to food. Choose: fewer plants may affect only plant-eaters / animals farther along too. Give one reason; choose a limit: selected links / exact animal numbers. Record C beside your book response.

Aspire

Compare the chains. Explain a possible effect on an animal that does not eat plants. Explain why exact numbers cannot be predicted.

Help: Trace each feeding link; mention another possible food source.

Animals get food by eating

Today I can... ☐ say that plants make their own food ☐ say that animals must eat to get theirs
☐ put a simple food chain in the right order

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Animals get food by eating

I can explain that animals get food by eating, and plants can make their own food.

Word help

Words for this lesson

producer : here, a green plant that makes food using light

consumer : an animal that eats to obtain food

food chain : a model of linked feeding relationships

energy : what passes along the chain when something is eaten

Follow these ideas

- A green plant is a producer: it makes food using light. An animal is a consumer: it eats to obtain food.
- Read grass → rabbit → fox: grass is eaten by the rabbit; the rabbit can be eaten by the fox.
- Read leaves → caterpillar → robin in the same way. The arrow points from food to its eater.

Keep the claim careful

A simple chain shows selected links. It is not a full food web and cannot predict an exact number of animals.

Show it

- I can say that plants make their own food.
- I can say that animals must eat to get theirs.
- I can put a simple food chain in the right order.

Animals get food by eatingToday I can... ☐ say that plants make their own food ☐ say that animals must eat to get theirs☐ put a simple food chain in the right orderFeedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____**Food-chain cards**

Cut out the organism cards and arrows. Place them on the desk; record the chain in your book.

grass	rabbit	fox
leaves	caterpillar	robin
cow	owl	small animal
producer	consumer	is eaten by →
is eaten by →	is eaten by →	is eaten by →

- Rabbits can eat grass; foxes can eat rabbits.
- Caterpillars can eat leaves; robins can eat caterpillars.
- Cows can eat grass; owls can eat small animals. These are examples, not complete diets.
- A model shows selected links, not the whole food web.
