Autumn Science: Show Your Thinking

Today I can... ☐ Explain one helpful and one unhelpful friction example ☐ Explain a mechanism gain and its cost ☐ Choose change, measure and controls for a fair comparison ☐ Explain an orbit and the Moon's reflected light

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

**Autumn Science: Show Your Thinking**

Reference only · record your answers in your book.

Learning goal: I can explain familiar science using an observation, model or genuine piece of work.

Word	Meaning
friction	a force opposing sliding or attempted sliding between touching surfaces
pivot	the point a lever turns around
control	something kept the same in a comparison
orbit	a curved path around another body

Key ideas

- Use genuine work if it is available; a missing record stays missing.
- A supplied comparison says the same block travelled 45 cm on smooth board and 19 cm on fabric. These are illustrative data, not your practical result.
- The evidence can support a claim about these surfaces and this block; one example is not every surface.
- A lever may reduce the effort force by increasing the effort distance. It does not create energy.

Keep the claim fair

Illustrative data support reasoning practice only. They are never recorded as a completed practical.
