Teacher and cover planner

Using labour-market information

Tuesday 10 November 2026 · P3 · 40 minutes · Year A

GROW · up to five learners · Independent is the default

Unit: Identity & Belonging — Belonging in work

Thread tags: SMSC S/So (M/C: none); British Values IL/MR (D/RL/T: none).

Exact source outcome

I can use current data on opportunities, skills demand, pay or growth to draw a cautious conclusion about a career area.

Weekly outcome: Students interpret current LMI to inform, rather than dictate, career decisions.

Source: specialist Careers scheme, GROW Careers, physical row 10, Autumn 2 row 2. Focus F10; outcome G10; sequence H10; timing I10; evidence J10; access K10; support L10; end check M10; formative N10.

Question and success checks

What can a table about work tell us, and what does it leave out?

1. Identify the practice source, report date, time window and unit. 2. Use an accurate value or comparison to support a conclusion. 3. Give a relevant limit and one next research question.

Prepare

Books, pens, the two practice data sheets, vocabulary mat and normal reading or typing aids. Offer one print set per learner. Use an adult model before the independent task. No web access, login or pupil phone is needed. A calculator is normal access if useful.

Data status and source adaptation

All labour-market figures are invented inside this pack as required. The exact scheme outcome remains unchanged. The named-area/current-data activity in H10 is replaced by generic practice sets A and B. Use the latest window within the fictional set, while teaching how a real source date would be checked. This lesson evidences interpretation and caution with illustrative data; it does not demonstrate use of verified current real-world labour-market data. Record that boundary rather than claiming full real-data application.

Where this leads

This helps me weigh evidence about work and choose what to research next. Work data can guide a question without deciding a learner’s future.

Forty minute teaching sequence

Phase	Min	Teaching and evidence
Retrieval	5	Recall sector and occupation from Week 1. Offer retail and checkout work as a neutral example. Ask what numbers about work might help us find out.
Explicit input	7	Introduce LMI and the practice-data label. Model source, report date, observation window and unit with source A. Read one pair of values and form a limited claim.
Guided analysis	10	Compare construction and retail in A. Discuss the different units and the conditional forecast in B. Use the private hinge and parallel hinge.
Independent application	13	Choose one sector in A or B. Record source/date/window/unit, a value or comparison, a cautious conclusion, a limit and one next question. Give feedback, then fade answer prompts.
Reflection	5	Check whether the conclusion follows from the data without overclaiming. Learner revises or explains their thinking. Keep actual evidence and a next question in the Careers Portfolio/action plan.

The five phases total 40 minutes. Vocabulary, checks, feedback and access pauses sit within these phases. Slide 11 can be used when needed; slide 12 is a hidden staff reference.

Worked example and fade

Model source A, health and care: “Practice source A, fictional report date 2 November 2026. It counts advert records in two 28-day windows. The count goes from 12 in September to 18 in October. That is six more records. In this set, more care adverts were counted in October. This does not prove that every care job is easy to get. I would next check what skills the roles ask for.” Read the source/date aloud. The report is fictional.

Fade to construction: prompt source/date, then ask for 20 and 24. Next, let the learner choose a row without the model. Retain normal reading or scribing access.

Check after explicit input

Ask privately: What is counted: advert records or people hired? Which label gives the period counted, rather than the report date? If either is unclear, point to the table header and model one row again before moving on.

Routes and planned access

Independent

Use the structured record to choose A or B, read the units and dates, justify a cautious conclusion with accurate data and give a next research question. A comparison within one source is enough. No compulsory personal career disclosure or public answer.

Supported

Use one source and one row at a time. Provide the vocabulary bank, a separate worked example and short prompts. Highlight the source/date strip and column labels. Cover unneeded rows. Keep the evidence demand: accurate data, source/date and a bounded conclusion. Fade answer scaffolds where secure.

Floor

Use source A, the retail row and the printed choices. Learner selects the right numbers, chooses or states a cautious conclusion, and points to source/date. An adult can read and record the learner's choice. Keep a relevant limit and next question through speech, pointing or typing. Record which elements were demonstrated and any supplied answers; do not claim a copied model as independent work.

Cognition and Learning

Use explicit teaching, a separate model and guided practice. Chunk the table by source and row. Keep the unit beside each number. Use the same short check routine for both sets. Offer a simple record structure and extra processing time.

Communication and Interaction

Pre-teach source, date, advert and forecast. Rehearse a sentence privately. Accept speech, pointing, reader, scribe or typing. Use short questions and allow wait time. No cold calling or forced pair work.

SEMH

Predictable five-phase sequence and private feedback. Use neutral sectors; no family income, job loss or personal future disclosure. Offer a regulation break and a planned return. "Not sure yet" can lead to a specific next question.

Sensory and Physical

Offer large print, one-row view and the usual reading or input aid. Avoid colour-only cues. Learners may use a calculator, scribe or keyboard. Keep the space calm and uncluttered.

EAL

Plan in any language. Check the meaning of count, latest and forecast with an example. Offer oral rehearsal and the same source labels. Treat language access separately from evidence of reasoning.

Normal reader/scribe/typing, aids and processing time do not automatically change the academic route. Record access mode separately from answer prompts.

Staff prompts and checks

Hinge during guided analysis

Source A has 24 retail adverts in October. Which claim fits? A: Everyone can get a retail job. B: This practice set counted 24 retail adverts in that window. Answer B. Ask for the number and a limit. If the learner selects A or cannot explain the unit, re-model the difference between an advert count and a personal job guarantee. Recheck privately before independent work.

Parallel hinge

Source B predicts 104 construction posts for October 2027 if the plans stay the same. Which claim fits? A: The model suggests 104 posts if its plan holds. B: There are 104 jobs to apply for today. Answer A. If uncertain, label the future date and the assumption. Retain a supported path and log partial evidence if the distinction remains insecure.

Speaking frames

F: “Source ... is dated ... . It counts ... . The number is ... .” M: “In this set, ... changes from ... to ... . This may suggest ... .” H: “This conclusion is limited because ... . I would check ... before using it for a real choice.”

TA focus

I do: check the learner can find the source/date and unit. We do: prompt a number or label as evidence; do not select the claim for the learner. Independent: log access and actual answer prompts, then fade support when secure. Support a calm return after a break.

Prompt ladder

1. Point to the place or instruction. 2. Ask a short question. 3. Rephrase the instruction. 4. Provide a scaffold or choice. 5. Model the first step only, then return the task.

Misconceptions and corrections

“More adverts means I will get a job.” An advert count is only one clue. It does not show an individual chance, all vacancies, or who was hired. “A forecast is a fact about next year.” It is a prediction based on assumptions. Plans and conditions can change.

Evidence and source end check

Evidence J10: LMI analysis with source/date and cautious conclusion. End check M10: Can the student make a conclusion that is supported by the data without overclaiming? Use the learner’s own response. Check the number, unit and period; a cautious word alone does not fix an unsupported claim.

Assessment and safe teaching

What this lesson can evidence

The source marks this week formative. Retain the learner's first claim, data reference, relevant limit, next question, actual support and any revision. Accurate interpretation of the supplied practice set is valid lesson evidence. Do not claim that illustrative figures demonstrate current real-world labour-market conditions. Any later real-source application needs a fresh, checked source and a separate record.

Response and feedback

Work in the book by default. Type instead is an optional equivalent response area with the same fields and demand. No pupil phone or login is required. Keep reader, scribe, normal aid and typing as access, not a lower route.

VF verbal feedback; WS worked with support; I independent; NS next step; // self-edit; ? read this back to me; E evidence recorded; R responded. Give one precise next step linked to the number, source or limit. R requires Voice and Audience, the NS and a learner response in the same colour, on the same page or usual mode. A private adult may be the audience. Use E only when actual evidence is banked.

Portfolio

Keep the analysis in the Careers Portfolio or action plan under usual arrangements. Offer one genuine explanation to the Communication portfolio; staff confirm any mapping. No unit completion is inferred. Never bank a blank record or the staff model as learner evidence.

Teaching need next lesson _____ Learner next research question _____

Boundaries

No actual labour-market fact, wage claim, real region, employer, organisation or entry requirement appears in the practice sets. Do not ask about household income or employment. Avoid ranking sectors or learners by worth. Data may guide inquiry, but interests, values, access and wider evidence also matter. No final career decision is required. Follow the usual safeguarding route if a concern arises.

Calendar and sequence

Year A. Autumn 2 Week 2, 9–13 November 2026. One lesson on Tuesday 10 November, P3, 40 minutes. Week 7 is assessing; Week 6 retains its mixed formative/summative source role. Week 3 follows only after this return is downloaded.
