

Knowledge Organiser

Key word	Definition
Frottage	Taking a rubbing by placing paper over a surface and drawing across it.
Relief	The raised and lowered parts of a surface — its height difference.
Texture	How a surface would feel to touch.
Pattern	Repetition you can see, with a rhythm to it.
Surface bank	The group collection of labelled rubbings everyone can draw on.
Ghosting	A rubbing so faint the detail cannot be read.

Surface Hunt

Enquiry: What can a rubbing tell you about a surface that a photograph cannot?

Award part: Bronze Part A · Take Part

Diagnostic:  Too hard — the paper tears and the detail fills in ·  Too light — a ghost image you cannot read ·  Right — raised detail crisp, background clean

Fix: Use the FLAT SIDE of the crayon, tape the paper down at both ends, and work in ONE direction. Never scrub.

Arrival Task

1. Last term (Recall) Name one decision you made in your last finished piece.

2. Vocabulary (Recall) Texture and pattern — what is the difference?

3. Foundational (Recall) Which drawing tool would pick up fine detail best, and why?

4. Greater depth (Think) Teesside is full of worked metal. What does that do to its surfaces?

Starter

Two records of the same drain cover — a photograph and a rubbing. Which one tells you more about the surface, and what exactly does it tell you?

We Do — the surfaces / cards

- Drain cover DEEP RELIEF.** Bold, geometric, forgiving — the best first surface. Medium pressure, one direction.
- Brick & mortar TWO SURFACES AT ONCE.** Smooth face against rough mortar line. Light pressure or the mortar takes over.
- Radiator grille REPEAT.** Even, mechanical rhythm — the closest thing to a ready-made pattern. Tape it or it slides.
- Coin FINE DETAIL.** Tests your control. Very light pressure, crayon almost flat.
- Tread plate DIRECTIONAL.** Raised diamonds that read differently depending which way you work. Try both.
- Wood grain SOFT RELIEF.** Subtle — needs the lightest touch of all, and rewards patience.

Scaffolding – Standard

The surface I will use again is _____ because _____.

When I changed the pressure, _____ happened.

Independent Work – Standard

Six rubbings + one repeated

Surfaces used:

The one I repeated, and what I changed:

What happened:

Exit Ticket

1) Which surface gave you the clearest rubbing, and why?

2) Name one thing that ruins a rubbing.

3) What will you use your best surface FOR?

Lundy Loop — this lesson

Space → Voice → Audience → Influence. The adult’s first job is Space: regulate before you educate.

Space	The surface table stays out all lesson, and you can route to it whenever you need — you do not have to ask.
Voice	You choose which surfaces are worth recording. Nobody assigns you one.
Audience	Your labelled rubbings go into the shared bank, so the group sees what you found.
Influence	The three most-used surfaces from this bank become the demonstration surfaces in Week 3.

Closing the loop: out loud, as a class, is enough here. Any inclusion counts — a nod, a word, a pointed finger. If a pupil wants theirs written down, an adult scribes it in *their* words. Pass is always allowed.
