_____

Starter and method strip

In your book: Give one short answer to the first question.

What pulls to bend the arm? Is it a bone or a muscle?

1.

Set out the four evidence cards. Do not lift or pull anyone else's arm.

2.

Choose one card. With the adult, find the named part, label or unit. STOP AND CHECK with the adult. Then go on.

3.

Look at the clue in the diagrams. Or move your own body in a way that feels safe and does not hurt. You can point instead. Both ways count.

4.

Write what the clue shows. Give one link between the ideas about the body, food or how we move.

Kit: Models on the board and cards made by the teacher.

Risk: Do not lift or pull anyone else's arm.

Safe: Use the diagram. Or move your own body in a way that feels safe and does not hurt. You may point instead.

_____

Independent

1. Use card 1. Give one example of a bone that protects. Then sort the dog and the earthworm using the backbone clue.
2. Use card 2. Describe the muscle pair when the elbow bends and when it goes straight.
3. Use card 3. Compare the sugar values per 100 g. Then say what the model results show about foot spacing.
4. Use card 4. Draw the chain and explain one arrow. Which living thing makes its own food?
5. Explain one link between food and moving. Use the word because.

Name the bone and the organ it protects. Sort the animals by what is inside them.

Use contracts and relaxes each time. Name the muscle that pulls.

Keep g per 100 g when you compare. Use the two counts. Say it is only true for the model.

Follow the food to the eater. Making food is not the same as eating it.

Say one nutrient job. Link it to muscles or bones.

Sentence stem: My evidence is ____; it shows ____.

I · S · C ☐

_____

Knowledge organiser

Reference only · record answers in your book.

I can use models and evidence to show what I know about skeletons, muscle pairs, nutrition, balance and food sources.

Words

Word	It means
skeleton	the bones in your body. They hold you up and keep parts safe
joint	a place where bones meet and move
contract	a muscle gets shorter and pulls
nutrient	a part of food that helps your body grow or work
vertebrate	an animal. It has a backbone inside its body
food chain	a path showing what eats what

Skeletons and classification

The skull keeps the brain safe. The ribs keep the heart and lungs safe. Bones hold the body up. A vertebrate has a backbone. An invertebrate has no backbone.

_____

Knowledge organiser · continued

Each arrow points from food to eater. Food and energy move this way. Grass makes food using light.

Green boxes show the plants and animals in the chain.

Connected explanation

Food gives us energy. Muscles use it to contract and pull bones at joints. The model helps us see how this works. A real body has more parts than the model shows.

Model steps

The biceps contracts and pulls on the forearm.

The triceps relaxes while the elbow bends.

For the reverse movement, the partner muscle pulls.
