Use: Show what you know about body science | BUILD Science

Today I can… ☐ Show one idea about bones. Show how we move. Show what food does and where it comes from. ☐ Use because to join two science ideas. ☐ Use a model or the evidence. Show how it backs up what you say.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?] _____

TA brief

Prompt ladder for adults

1. Point to the relevant place / instruction.
2. Ask one short question: "What is it asking you to find?"
3. Rephrase the instruction in simpler language.
4. Provide a scaffold or limited choice.
5. Model the first step only, then return the task to the pupil.

Access and independence

No cold calling; nobody is asked to read difficult text aloud.

A pupil who missed last lesson: give the Arrival reminders and today's must-know words, not the missed lesson's work.

Tell the teacher the barrier: reading, vocabulary, processing, regulation, writing or a science misconception. Avoid prompting through every question or dictating the final answer.

Beside the You do, mark I (independent), S (supported) or C (choice): the level of independence, not the effort.

00–04 · Arrival · 4 min

Use Arrival reminders if the pupil missed the last lesson. Four brief answers in the book; accept pointing, drawing or exact-word scribing.

04–07 · Starter · 3 min

Do not read answers until pupils have responded. Use the misconception for discussion.

07–12 · I do · bones and a muscle pair · 5 min

Alternate bend and straighten. Name the contracting muscle and trace which bone moves. Skeleton reference is available in a disclosure.

12–17 · We do · match the bone jobs · 5 min

Keep every original bone-job clue and the backbone contrast; answers stay gated in question activity.

TA brief · continued

17–21 · I do · food and model evidence · 4 min

These model results are labelled invented; they are evidence interpretation, not a pupil practical completion. Read nutrient table aloud.

21–25 · We do · organise a food chain · 4 min

Build the chain with the order cards, then get all answers at once. Use private RAG after the book response.

25–26 · You do · use the evidence · 1 min

The four evidence cards are referenced; use the diagrams on earlier stages and the organiser. No new practical.

26–36 · You do · connect the science · 10 min

Read five route questions individually; privately note RAG against success criteria. Supports and pictures are valid, no public score.

36–37 · Review and improve · 1 min

One adult gives VF; one gathers private RAG. Ask for one self-edit or a spoken next step.

37–40 · Exit ticket · 3 min

Read this private closure with the support used in mind. Use it to set Autumn 2 starts and routes.

Adaptations and evidence

Cognition and learning: Arrival and independent: show one of the four evidence cards at a time; point to the deciding clue before moving on; fade the prompt once the pupil continues.

Communication and interaction: We do and check: read one option aloud, allow silent planning and accept point, sign, drawing or exact scribing; wait before revealing.

SEMH: Arrival and review: use a predictable first–then cue, a private check-in and an agreed pause/re-entry. Give one quiet next step with no public scores.

Sensory and physical: I do and independent: use projected diagrams or large adult-prepared cards; no forced handling, balancing, lifting or pulling a person's arm.

Evidence in this lesson: Book responses to four strands, one because connection, the model or number used, prompt level, and the exit; individual responses stay private.

Evidence location: Independent work and exit answers in books under the strip; any spoken or pointed answer is recorded as the pupil's exact response with support level.

Must teach core: Preserve one individual response on bones, muscle pairs, food/nutrition and food-chain direction, plus one because link and the exit evidence.

Shorten or merge: Shorten repeated group card rehearsal after a secure check; use the reference cards without handling. Keep the independent responses and private review.

Safety and preparation

Kit: Models on the board and cards made by the teacher.

Risk: Do not lift or pull anyone else's arm.

Safe: Use the diagram. Or move your own body in a way that feels safe and does not hurt. You may point instead.

Put out just the kit for this stage. If you cannot take part safely, watch the teacher show it. In your book, write what you saw. Say what you can tell from it.

After the task, write what you saw. Say what it tells you about today's goal. Add the steps or a diagram only if they are part of the task.

Arrival and Exit keys

The skull keeps the brain safe.

It starts to contract. It gets short and pulls.

The dog has a backbone.

J has less sugar per 100 g.

The biceps contracts. It gets short and pulls. Its partner is the triceps. It relaxes.

Food gives energy. We need it to move. Muscles use it. Food moves from grass to rabbit.

The biceps contracts. It gets short and pulls the forearm at the elbow. The triceps relaxes. Bones and muscles work as a team.

Food gives us nutrients. These parts of food give us energy. They help our body work. Muscles use it to contract. The arrow shows where food and energy go. They move from grass to rabbit.

Muscles contract. They get short and pull bones at joints. The biceps contracts. It pulls to bend the arm. The triceps contracts. It pulls to make the arm straight. Its partner relaxes.

Food gives energy and parts to help us grow. Muscles use energy to contract. They pull bones at joints. The model leaves out tendons and other muscles. It leaves out the 3D shape and fine control.
