Sequence and evidence guide

Design and Technology LAUNCH Spring 1 Week 2 Thursday 14 January 2027 P1 Year A

Design and Technology LAUNCH Spring 1 Week 2. Use the dated teacher and cover plan and the pupil's Week 1 meal plan first. School and Public contain the same generic resources.

Design make evaluate

Week 1 designed and costed the meal. Week 2 prepares the agreed two- or three-step dish safely. Week 3 will evaluate the actual dish, cost and nutrition. Weeks 4–6 move to textiles and the final week assesses. Only Week 2 is included here.

Evidence to retain

Keep the actual dish, preparation steps, support, observed safety actions, any real change, storage decision and food-only plate photo location or pending status. The photo is one piece of evidence alongside process observations.

Private records

Complete the blank allergy note from current school records and actual ingredient labels. Keep completed allergy and healthcare information secure. Capture plate photographs only with the approved adult-operated process. Remove identifying image content and metadata before attachment. Completed records do not belong in public teaching files.

Book first and tiers

Pupil pages prompt work in the book. Select Supported, Standard or Stretch. Type instead begins closed, and Save my responses downloads a local text record. No response or photo is uploaded. Rehearse in any language.

Where this leads

Food preparation teams use clear methods, safe tools and accurate records. They adapt a plan while keeping the person eating the food safe.

Fallbacks and practical boundaries

Design and Technology LAUNCH Spring 1 Week 2 Thursday 14 January 2027 P1 Year A

No kitchen

Use the same planned cold wrap with adult-supplied washed, pre-cut vegetables and cooked ready-to-eat beans. Pupils mash, mix, fill and fold using a fork, bowl and clean work surface. No heat or knife is needed. Staff must still approve handwashing with potable water, cleaning, food-safe preparation, labels, allergy controls, supervision and verified cold storage. A checked insulated cold container may be used only if it holds food at 0–5°C. If any requirement cannot be met, use the materials-free simulation and keep practical competence pending.

No safe food facilities or materials

With no safe food facilities, food or equipment, rehearse with empty hands or pictures. The pupil explains or directs the three steps and names a safety action at each point. Record this as planning or simulation, not preparation. Mark the practical and any plate photo pending. Rebook the practical when the adult can meet all safety requirements.

A missing Week 1 plan

Use the supplied three-step model as a new checked plan. Record it as agreed today. Complete the actual records, ingredient, method and facilities checks before giving GO. Do not invent an earlier plan or claim that planning already happened.

Storage and hygiene

Keep chilled food at 0–5°C and out for the shortest practical time. Follow the earliest relevant use-by and storage instructions. Plan same-day eating. Agree safe chilled transport before food is taken home. Refrigerate leftovers promptly; use within 48 hours or freeze if suitable, following labels. An adult decides storage or disposal. Never refrigerate beans in their opened tin.

Picture and source basis

The three-panel food strip is an original generated teaching illustration of invented generic food. Written steps and actual approved quantities control the practical. It is never pupil evidence. Generic hygiene, chilling and allergy teaching was checked against current public guidance on 30 October 2026. No external pages, addresses, named suppliers or copied guidance are included.
