Staff answers and accurate checks

Design and Technology LAUNCH Spring 1 Week 5 Thursday 4 February 2027 P1 Year A

The common purpose

Make a small reusable pouch to hold three paper prompt cards, each 60 mm by 80 mm. Leave the top open. Join the sides and bottom. It should hold the cards upright, have no loose sharp parts and be comfortable to handle.

Default dimensions

Default plan: two pieces, each 100 mm wide by 120 mm high. This is 10 cm by 12 cm. Mark a seam line 10 mm inside the left, right and bottom edges. Keep the top open. Use the pupil’s actual approved Week 4 design if it differs.

Unit checks

100 mm equals 10 cm. 120 mm equals 12 cm. 10 mm equals 1 cm. Align the printed zero mark, not an unmarked ruler end.

Accuracy hinge

A 103 mm width is 3 mm more than 100 mm and falls outside 98 to 102 mm. Remeasure from zero, then agree a safe correction before joining. A 101 mm width is within the range.

Parallel hinge

A seam line 7 mm from the edge is outside the 8 to 12 mm range for a 10 mm target. Re-mark it before joining. A 9 mm margin is within the range.

Join check

Running stitches pass through both aligned layers along the seam guide. Small even passes about 5 mm apart leave thread flat. The top remains open. Secure the end using the demonstrated loop twice and return counted needles.

Actual choices

A revised design must have recorded targets and adult approval. Use that plan rather than forcing every pupil into the default. Bonding needs actual label and full cure checks; a fastening does not replace the side and bottom joins.

Staff misconceptions and evidence

Design and Technology LAUNCH Spring 1 Week 5 Thursday 4 February 2027 P1 Year A

The ruler end is always zero.

Find and align the printed zero mark before reading the length.

A fastening joins the sides of the pouch.

Fastenings close an opening. The left, right and bottom still need their agreed join.

Pulling thread hard makes the join better.

Pull gently away from faces so the thread lies flat. Too much tension can gather or pucker the fabric.

A paper model proves textile making.

Label the model as simulation and keep textile practical evidence pending.

Cold call with choice of response

Foundation: Point to the ruler zero and the seam guide. Expected: the printed zero and line 10 mm inside the three joined edges.

Middle: Why is 103 mm outside the default width check? Expected: it is more than 102 mm, so remeasure and consider a safe correction.

Higher: What does an even join and flat thread help? Expected: it keeps layers aligned and avoids gathering while the pouch holds its cards.

An honest model account

Adult example only: I marked the rectangles and checked a 101 mm width. The adult cut the fabric. I sewed part of one side with prompts. The remaining seams are unfinished. Do not copy this as a pupil observation.

What to retain

Keep actual work and date, original or revised design, true measurements and units, pupil and adult roles, needle return, join stage and next step. Simulation leaves practical evidence pending.
