Teacher and cover plan

Design and Technology LAUNCH Spring 1 Week 6 Thursday 11 February 2027 P1 Year A

Finish and evaluate our card pouch

Weekly outcome verbatim: TEXTILES: finish and evaluate a textile product.

LAUNCH Weekly Spring row 202. Year A. Resilience & Change. assessing week. One 40-minute lesson for a small group aged 14–16.

Retrieve the actual Week 4 design and Week 5 item or unfinished work. Finish safely, conduct limited purpose checks and record the pupil’s own evaluation. Use the six-outcome Evidence Sheet grid to review the half-term honestly.

Prepare

Have the actual work, ruler, three paper cards each 60 mm by 80 mm, agreed fabric/thread/tools and a needle container. The adult selects and supervises tools and counts needles out and back. A non-specialist cover adult uses agreed prepared materials or directed adult handling if not competent to supervise the sharp tool action.

Read the finishing and test cards. Check the actual label and full cure if the pupil’s design used adhesive. No heat, iron or solvent task is introduced. Keep any unclear check on hold. The model and material-free route never stand in for actual practical evidence.

Timing

Stage	Minutes
Arrival	5
Starter	3
I do	5
We do	7
We do 2	5
Independent	8
Review	4
Exit	3

Total 40 minutes. Supporting cards, hinge checks and tiers fit within the stages. Pause with tools down, and clear progressively to leave time for tool counts and cleaning.

The actual item and evidence

Design and Technology LAUNCH Spring 1 Week 6 Thursday 11 February 2027 P1 Year A

Arrival 5 minutes

Say and do: This is the assessing week. Retrieve the actual W04 design and W05 item or unfinished work. If either is missing, record that truthfully. Read the small card-pouch purpose. The adult checks tools, controls and counts needles before issuing them. Confirm whether any adhesive has fully cured according to the actual label. A missing item or unresolved safety check uses simulation, with practical testing pending.

Check and response: Ask: What must the pouch do? Expect it to hold three 60 by 80 mm cards upright, with safe joined edges and comfortable handling. Re-read the purpose if the answer is only look nice.

Starter 3 minutes

Say and do: Compare the two statements. The first is a prediction; the second claims an actual test and needs a truthful record. Explain that model statements are examples, not observations of a pupil’s item. Pupils may point, speak or sign. Keep any test not yet done marked pending.

Check and response: Expected: the second statement describes a result only if the pupil actually did the test. If uncertain, sort a second pair: I expect the seam to hold / I gently lifted the upright pouch and the seam held.

Demonstration and safe finishing

Design and Technology LAUNCH Spring 1 Week 6 Thursday 11 February 2027 P1 Year A

I do 5 minutes

Say and do: Use a safe sample, not the pupil’s evidence. For running stitch, demonstrate a small securing stitch through both layers on the back. Leave a loop before pulling tight, then pass the needle through it, pull snug and repeat once. Keep fingers clear of the needle exit. Demonstrate trimming the loose tail only with agreed scissors. Return the needle to its container and count it back. Show an unfinished edge and explain why it is not ready. Fade the model by asking the pupil to name the next safety action.

Check and response: Ask: Can we test with a needle still in the item? Expect no, stop and get the adult to remove and account for it. If not secure, keep tools with the adult and use directed handling.

We do 7 minutes

Say and do: Supervise the approved finishing action or let the pupil direct adult handling. The actual design controls the join. An adhesive route follows the actual label and full cure; it is not assessed as hand stitching. Keep the top open for this default pouch. Record exactly which actions the pupil and adult completed. Stop safely if time or skill support is insufficient. Begin clearing progressively.

Check and response: Look for a real action, secured loose ends or an accurately recorded unfinished part. Record support. Do not infer an independent stitch from the adult’s work.

Hinge and purpose testing

Design and Technology LAUNCH Spring 1 Week 6 Thursday 11 February 2027 P1 Year A

We do 2 5 minutes

Say and do: Correct hinge response is stop for adult removal and count. If any pupil chooses otherwise, stop their testing and reteach before restart. Parallel check: a bonded seam has not reached its full labelled cure; leave the test pending and wait. A correct quiz response does not itself clear the actual item. The adult checks the item, tools and joining method.

Check and response: All pupils identify stop-and-clear before testing. Recheck with the uncured seam example if needed. Only an actual adult safety check permits testing.

Independent 8 minutes

Say and do: The independent stage still has agreed adult supervision. Use the actual three paper cards, each 60 by 80 mm. Check fit without force, upright gentle hold, joined edges and comfortable handling. No upside-down or shaking test is needed. Record the actual result or pending status. The pupil supplies their own evaluation and prioritised improvement. Adult scribing is read back. A missing item uses a prediction labelled simulation, not a result.

Check and response: Look for evidence linked to the purpose: what happened, what it shows, and one useful next action. Accept an honest failed or incomplete test with reasoning. Do not reward invented success.

The six outcomes and closure

Design and Technology LAUNCH Spring 1 Week 6 Thursday 11 February 2027 P1 Year A

Review 4 minutes

Say and do: Use both pages of the Evidence Sheet, including the six-outcome tick-and-comment grid. The pupil confirms their own evaluation; the adult checks actual evidence and support. Food evidence comes from the earlier records, not a new claim or a taste inferred from a photo. A gap stays visible. A tick records weekly evidence, not qualification completion. Count and store all tools and clear the area.

Check and response: A chosen status needs a brief comment and actual location or honest gap. Keep pupil words and adult observations separate. No automatic whole-term pass is generated.

Exit 3 minutes

Say and do: Confirm the item, design, test record, evaluation, grid and book locations. Let the pupil correct the words. Record unresolved finishing or testing as pending and agree a supported next opportunity if needed. This closes the six-week strand. No later lesson or award completion is claimed.

Check and response: Accept the pupil’s own evidence-based view through writing, speech, signing or exact confirmed scribing. A realistic next step can follow any outcome, including an unfinished item.

Access support and alternatives

Design and Technology LAUNCH Spring 1 Week 6 Thursday 11 February 2027 P1 Year A

Cognition and Learning

Show one action and test at a time. Model the first step, then fade support. Keep the design and actual item side by side. Read grid outcomes aloud and chunk them into two groups of three.

Communication and Interaction

Accept pointing, speech, signing or pupil-directed adult handling. Ask one short question and wait. An adult may scribe exact pupil words, read them back and allow correction.

SEMH

Offer a private adult review and a calm pause with tools down. Unfinished work and gaps are recorded without ranking pupils. No public performance, personal disclosure or competition is required.

Sensory and Physical

Use an appropriate agreed tool, prepared threaded needle or adult handling directed by the pupil. Offer visual checks without touch. Record the actual role rather than claiming an unperformed skill.

EAL

Rehearse in any language. Pair the word with the actual action or item. Offer a short sentence start. Confirm meaning and read the pupil’s record back.

Prompt ladder

Point to the place or instruction. Ask a short question. Rephrase. Offer a scaffold or choice. Model the first step only, then return the task.

Materials free fallback

Without an actual safe item, materials or tools, use a spoken, signed, paper or empty-hand model. Explain the finishing sequence and predict how a test would work. Label it simulation. Keep actual finishing and product testing pending. Use real earlier evidence for the six-week grid; do not fill gaps with the class model.

Where this leads

Textile makers and quality-checking teams compare a finished item with the brief. They record real test results and use them to choose a useful improvement.
