Sequence and evidence guide

Design and Technology LAUNCH Spring 1 Week 6 Thursday 11 February 2027 P1 Year A

Design and Technology LAUNCH Spring 1 Week 6. This is the assessing week. School and Public contain the same generic teaching content. Use the dated teacher plan and the pupil’s actual earlier work.

The design make evaluate cycle

The food unit used planning, safe preparation and evaluation in Weeks 1–3. Textiles used purpose and material choices in Week 4 and measuring, cutting and joining in Week 5. This week finishes and evaluates the actual product. Only Week 6 is included here.

The actual product

A small reusable pouch for three paper prompt cards, each 60 mm by 80 mm. The top stays open. It should hold the cards upright, have joined sides and bottom, contain no loose sharp parts and be comfortable to handle.

Default model: two fabric pieces, each 100 mm wide by 120 mm high. A seam line is 10 mm inside the left, right and bottom edges. Leave the top open. Default join is hand running stitch. Use each pupil’s actual approved design and any recorded change.

Evidence to retain

Keep actual finishing actions, support, test results or pending status, the pupil’s evaluation and one improvement. The Evidence Sheet has a six-week tick-and-comment grid. Check all six verbatim outcomes against actual work and locations. No automatic award or pass is generated.

Books and access

Books and existing records come first. Use one tier: Supported, Standard or Stretch. Rehearse in any language. Accept pointing, signing, speech and confirmed scribing or pupil-directed handling, with the actual support recorded.

Safe tests and honest gaps

Design and Technology LAUNCH Spring 1 Week 6 Thursday 11 February 2027 P1 Year A

Before testing

The adult selects and supervises appropriate needles, scissors and tools for the actual fabric. Count needles out and back, keep them in a container and never put pins or needles in the mouth. Pause with tools down. For a missing or broken needle, stop, keep the area clear and let the adult recover and account for all parts and control disposal. Do not release or test the pouch until all sharp parts are accounted for. Do not test an uncured adhesive join. Use the actual label and adult approval; no cure time is invented.

A missing or unfinished item

Without an actual safe item, materials or tools, use a spoken, signed, paper or empty-hand model. Explain the finishing sequence and predict how a test would work. Label it simulation. Keep actual finishing and product testing pending. Use real earlier evidence for the six-week grid; do not fill gaps with the class model.

A useful evaluation

The pupil says how the actual result relates to the purpose. A failed fit, an open gap or an unfinished join can lead to a useful improvement. Keep a predicted improvement separate from one actually made. Let the pupil correct an adult scribe’s words.

The half term grid

Shown records actual evidence for that outcome. More to do records partial evidence or a step still needed. Not yet seen records no available evidence. Add a date, location and brief comment. Keep pupil words separate from adult observations.

Where this leads

Textile makers and quality-checking teams compare a finished item with the brief. They record real test results and use them to choose a useful improvement.
