

Resource use and climate evidence · Pupil resources

Supported arrival · choose one route

Point, speak, sign, draw, write or direct an adult. An adult may read or scribe your exact words. Choose one route; do not complete all three.

1. Resource

Which is a fuel resource: coal or a chart title?

Help: A fuel can be burned for energy.

2. Emissions

Does emissions mean gases released or distances travelled?

Help: Think about gases entering the atmosphere.

3. Read values

Which is larger: 384 or 373?

Help: Compare the tens after the shared hundreds.

4. Source check

Which helps check online evidence: its author and date or only its colour?

Help: Think about who made it and when.

Standard arrival · choose one route

Point, speak, sign, draw, write or direct an adult. An adult may read or scribe your exact words. Choose one route; do not complete all three.

1. Resources

Name one fossil fuel used for energy.

Help: Coal is one example.

2. Evidence

Why record the date of an online dataset?

Help: Figures may refer to earlier years or be revised.

3. Calculate

Find the difference between 384 and 373.

Help: Subtract 373 from 384.

4. Scope

Does a UK figure automatically describe the whole world?

Help: Compare a country with the globe.

Stretch arrival · choose one route

Point, speak, sign, draw, write or direct an adult. An adult may read or scribe your exact words. Choose one route; do not complete all three.

1. Explain a link

How can burning a fossil fuel affect climate?

Help: Connect combustion, greenhouse gases and warming.

2. Audit

Name two checks before using a chart as evidence.

Help: Consider author, date, units, scope and method.

3. Quantify

A value falls from 384 to 373. Estimate the percentage fall.

Help: Use $11 \div 384 \times 100$.

4. Limit a claim

Why does a fall in annual emissions not prove climate change has stopped?

Help: Consider emissions still occurring, accumulated gases and global scope.

Evidence to use

Net UK territorial greenhouse gas emissions

Rounded headline values · MtCO₂e · zero-based bars

DESNZ statistical release, 5 February 2026, pp. 1 and 6. 1990 is reconstructed from rounded headline figures (373 + 417). Years are selected, not evenly spaced. Bars compare totals; they are not a continuous time axis.

Supported independent task

Use the frame: “DESNZ reports UK territorial emissions of ___ in 2023 and ___ in 2024, measured in ___. Using less ___ can reduce emissions. Greenhouse gases contribute to ___. This dataset does not show ___.” Say it, write it or direct an exact scribe.

Exit

Give the 2024 UK total and one missing answer.

Standard independent task

Write or present a short geographical explanation: identify the source and date; compare two figures; explain a resource-use link to emissions and climate change; end with one limitation of the dataset.

Exit

Give one quantified pattern and one geographical limitation.

Stretch independent task

Evaluate the claim: “Falling UK emissions show resource choices can matter, but do not prove the climate problem is solved.” Use two figures, a causal explanation and a geographical limitation. Distinguish emissions from temperature.

Exit

Explain why falling UK emissions and continuing global warming can both occur.
