Files and folders

A file contains saved work. A folder groups files. Profile_A_v1 is easier to identify than work because it describes the contents and version. Different clear naming systems can also be valid.

A successful save

The file is in the agreed folder, has a useful name, opens successfully and shows the pupil's intended text. A thumbnail, recent-files entry or file name alone does not prove the contents saved.

Profile sorting

Detail	Model decision for this task
Profile label	Keep: identifies the made-up profile.
General hobby	Keep: relevant to the hobby-group introduction.
Home address	Leave out: not needed by the group.
Contact number	Leave out: not needed for the introduction.
Full date of birth	Leave out: not needed for this task.
Account password	Leave out: a secret used to protect access.

A suitable pupil explanation is: I left out the home address because the group only needs to know a hobby. Accept other accurate reasons about purpose, audience or access.

Staff checks and next steps

Year A | Autumn 2 Week 1 | 2 November 2026

Privacy misconception

A folder named Private does not itself restrict access. Actual permissions and sharing settings control access. A general hobby can still be personal information; its use here is limited to a fictional profile and a stated audience.

Version comparison

The first copy remains. The second copy contains a useful added sentence. Both open. A changed file name alone does not prove an improved document. The pupil identifies the specific text change.

Examples of next-step prompts

Can you show the folder instead of the recent-files list? Which part of the name tells you what is inside? Does the group need that detail? What would you check before sharing a link?

Evidence decisions

Seen: the pupil shows the action or gives an accurate reason. Supported: record the action and exact prompt. Not yet seen: use this when the action did not occur or devices were unavailable. Do not turn a partner’s success into individual evidence.
